NOVA CONSULTING

Leaders in Environmental and Engineering Services

EXECUTIVE SUMMARY

Nova was authorized by Main Street Companies, Inc. to conduct a Phase I Environmental Site Assessment (ESA) of the Grand Pre by the Park Apartments property located at 200 South Winthrop Street & 215 South Kipling Street, St. Paul, Minnesota 55119 ("the Property"). Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2013, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM E 1527-2013 standard practice and authorized Scope of Services.

This Executive Summary summarizes the key findings of this assessment based on information and data available to Nova during the performance of this project. The Executive Summary also presents Conclusions and Recommendations, which are based on the conditions existing at the time of the assessment. This summary does not contain all the information that is found in the full report. Detailed information regarding these findings is provided in the corresponding section of the text of the report. The report should be read in its entirety to obtain a more complete understanding of the information provided.

Consultant has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Environmental Assessment Report; and Consultant has no personal interest with respect to the subject matter of the Environmental Assessment Report of the parties involved and consultant has no relationship with the property or the owners thereof which would prevent an independent analysis of the environmental or other conditions of the property.

FINDINGS AND CONCLUSIONS

The following table summarizes the findings of the significant elements of this investigation.

ASSESSMENT COMPONENT	No Concern	REC, CREC, Or HREC	Routine Solution	Additional Investigation	Reference Section
Historical Review	X	NO			3.0
On-site Operations	X	NO			4.2
Hazardous Materials	X	NO			4.5
Waste Generation	X	NO			4.6
PCBs	X	NO			4.7
Asbestos	X	NO			4.9
Lead in Drinking Water	X	NO			4.4
Storage Tanks	X	NO			4.8
Surface Areas	X	NO			4.3
Regulatory Database Review	X	NO			5.0
Lead-Based Paint	X	NO			4.11
Radon	X	NO			4.10
Mold	X	NO			4.12
Dry Cleaners	X	NO			4.13
Other / Vapor Encroachment	X	NO			4.14
Surrounding Properties	X	NO			4.15

The Property includes approximately 8.9 acres improved with a three-story, 335,466-square foot, multi-family residential apartment building constructed in 1976. The building offers a total of 216 rental units split between two designated areas of the building identified as Building 200 (western and southern portions) and Building 215 (northern and eastern portions). Access to the asphalt-surfaced Property parking lots of the Property is provided from South Winthrop Street to the west and from South Kipling Street to the east. Grass and landscaping surround the building and parking lots.

The Property is situated within a residential area of the City of St. Paul. The Property is bound to the west by South Winthrop Street, followed by Battle Creek Park; to the north by Hillsdale Avenue, followed by residential dwellings; to the east by South Kipling Street followed by the Park Apartments; and to the south by undeveloped land followed by the Battle Creek Bike Trail.

The available historical information indicates the Property was developed as farmland by at least 1937 until the late 1950s or early 1960s when the Property was left vacant and fallow. The Property remained vacant land until the current residential improvements were constructed in 1976. Since 1976, the Property has been occupied by the existing residential apartments. The following addresses were determined to have historically corresponded to the Property: 200 South Winthrop Street and 215 Kipling Street South. Overall, historic uses of the Property prior to the current development are not expected to have resulted in the potential for current impacts to the Property subsurface.

Surrounding properties were generally cultivated farmland from at least 1937 through the 1950s. Residential development began to the north during the 1960s and to the east during the 1970s. The remaining adjoining properties consisted of undeveloped land (south) and Battle Creek Park (west). Based on information discussed below, historic uses of the surrounding properties are not expected to have resulted in the potential for current impact to the Property subsurface.

Nova has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of Grand Pre by the Park Apartments property located at 200 South Winthrop Street & 215 South Kipling Street, St. Paul, Minnesota 55119, the Property. Any exceptions to or deletions from this practice are described in Section 1.6 of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) associated with the Property.

The following items of environmental concern were noted that warrant mention:

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is

constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996 and 2007) and tank tightness testing (2002 and 2017) have not identified indications of a release from the UST. Concurrent to this ESA, a Limited Subsurface Investigation / Phase II Environmental Site Assessment was completed, and a report was prepared under separate cover. A summary of salient findings is described as follows. Three soil borings were advanced surrounding the UST to depths ranging between 21.5 and 26 feet below ground surface (bgs). One of the borings, GP3, was completed as a temporary monitoring well. Soil and groundwater samples were collected from each boring/well for laboratory analysis of volatile organic compounds (VOCs), and diesel range organics (DRO). Analytical results were non detect for VOCs and DRO. Based on the analytical results, the UST system is not considered a REC to the Property; however, the UST system is 40 years old and has reached an age where tanks statistically begin to fail. Additionally, regulatory records identified the 30,000-gallon UST as "abandoned" while the tank remains in use as a back-up fuel source for the boilers.

RECOMMENDATIONS

Based on the findings of this Phase I Environmental Site Assessment, Nova recommends the following:

- Given the age of the UST system, annual tightness and line testing or soil sampling and analysis should be conducted as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents. Additionally, proper documentation should be submitted to the MPCA to update the status of the UST to "Active".

- Continued maintenance of identified asbestos-containing and lead-containing materials in accordance with the reported Operations & Maintenance (O&M) Plans for the Property.

1.0 PROJECT DESCRIPTION

1.1 Site Description

Site Address	200 South Winthrop Street & 215 South Kipling Street, St. Paul, Ramsey, Minnesota
Topographic Location	SE 1/4 of Section 2, Township 28N, Range 22W
Tenant Description	Grand Pre by the Park Apartments, numerous multi-family residents
Site Acreage, Building(s) Description	Acreage: 8.9 acres; Bldg. description: 335,466-square feet; 3-story, subgrade parking garage
Site Exterior	Landscaping, paved parking & drive areas

A copy of a portion of the topographic map of the area, with the Property location marked, is included as Figure 1.

1.2 Purpose

The purpose of this ESA was to identify the potential for *recognized environmental conditions* to exist at the Property. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Nova understands this ESA is also being completed to assist in qualifying for Landowner Liability Protections (LLPs) under CERCLA unless otherwise so stated in this report.

Environmental issues or concerns at a property that are outside the scope of ASTM E1527-2013 that parties may wish to assess in connection with commercial real estate transactions include, but are not limited to the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, health and safety, ecological resources, endangered species, indoor air quality, and high voltage (EMF) power lines. These items, unless requested by the client or as deemed relevant to a Site on a case-specific basis, are not included in this ESA.

1.3 Reliance

Main Street Companies, Inc., Bridgewater Bank and affiliates (collectively, "Client") may use and rely upon this Report in connection with a planned financial transaction involving the Property.

1.4 Scope of Services

Nova's Scope of Services for this Phase I ESA conforms with the American Society for Testing and Materials (ASTM) due diligence standards detailed in the ASTM document "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM designation E1527-2013). Services provided for this project included:

- A review of readily available topographic, geologic, and hydrogeologic information pertaining to the Property and surrounding area;
- A review of readily available information regarding historical land use activities at the Property, and interviews with people that have knowledge regarding the past or present uses of the Property, and with present and past owners, operators, and occupants of the Property, where feasible;
- A reconnaissance of the Property to visually and physically observe the Property for evidence of potential recognized environmental conditions;
- A limited review of federal, state, and local regulatory information records for reported potential environmental hazards on or in the vicinity of the Property;
- Determination of the potential for vapor migration to exist in the Property subsurface; and
- Review of previous environmental reports, if available.

No sampling or analytical testing was conducted as part of this Phase I ESA. This Phase I ESA does not constitute a regulatory compliance audit of the Property; however, any obvious issues of noncompliance are noted in the report. Copies of resumes of Nova staff involved in the preparation of this report are included as Appendix A.

1.5 User's Responsibilities & Obligations

The Pre-Survey Questionnaire Form was completed by Jack Hurley, Managing Partner of the current ownership group GreenHead Investments. Main Street Companies, Inc. and Mr. Hurley have not reported the existence of any environmental liens encumbering the Property. Main Street Companies, Inc. and Mr. Hurley did not report specialized knowledge and experience which provides important information regarding previous ownership or use of the Property which is material in identifying recognized environmental conditions.

1.6 Non Conflict Statement

Consultant has no present or contemplated future ownership interest or financial interest in the real estate that is the subject of this Environmental Assessment Report; and consultant has no personal interest with respect to the subject matter of the environmental assessment report or the parties involved and consultant has no relationship with the Property or the owners thereof which would prevent an independent analysis of the environmental or other conditions of the Property.

2.0 GEOLOGIC SETTING

Published geologic information indicates the following:

Topographic Site Elevation	900 to 930 feet above mean sea level
Surficial Materials	Till deposits composed of sandy loam, clay loam and silty clay
First Bedrock Beneath The Property, Physiographic Province / Geologic Age	Middle Ordovician aged sandstone of the St. Peter Sandstone Formation
Estimated Depth To Bedrock Beneath Site	100 feet below the ground surface

2.1 Area Hydrogeology

Published hydrogeologic maps indicate the following:

Depth to groundwater beneath Site	20 to 30 feet below the ground surface
Regional groundwater flow direction	West-southwest, towards the Mississippi River, which is approximately 2.25 miles west-southwest from the Property
Sole source aquifer (if present)	The Property does not overlie a sole source aquifer.

(Groundwater flow direction is estimated based on a review of published maps. Site specific groundwater flow conditions may be impacted by a variety of factors including, but not limited to, local topography, geologic anomalies, utilities, nearby wells or sumps, and local drainage patterns. Site specific groundwater information would require a groundwater investigation, which is beyond the scope of this ESA.)

2.2 Records of Water Wells

Nova reviewed well log records provided by the Minnesota Department of Health's County Well Index online server for the area of the Property. These well records were compiled by the MDH and the Minnesota Geologic Survey (MGS) from drilling records and well log records submitted to the agency. No well records were on file for the Property.

2.3 Hydrologic & Topographic Conditions

The Property topography slopes downward towards the southwest. Surface water drainage is expected to flow into storm water drains located in the Property parking lot and adjacent streets.

2.4 Flood Zone Information

A review of the Flood Insurance Rate Maps, published by the Federal Emergency Management Agency, was performed. According to Panel Number 27123C0117G, dated June 4, 2010, the Property is located in Flood Zone X. Flood Zone X regions consist of areas outside the 100 and 500 year flood plains.

3.0 HISTORICAL LAND USE REVIEW

Readily available historical information was reviewed to evaluate the previous uses of the Property, and previous uses of properties in the vicinity of the Property. This section summarizes the results of the historical evaluation. Information reviewed for this project is listed in the Reference Section.

3.1 Site Use Summary

The available historical information indicates the Property was developed as farmland by at least 1937 until the late 1950s or early 1960s when the Property was left vacant and fallow. The Property remained vacant land until the current residential improvements were constructed in 1976. Since 1976, the Property has been occupied by residential apartments. The following addresses were determined to have historically corresponded to the Property: 200 South Winthrop Street and 215 Kipling Street South. Overall, historic uses of the Property are not expected to have resulted in the potential for current impacts to the Property subsurface.

Surrounding properties were generally cultivated farmland from at least 1937 through the 1950s. Residential development began to the north during the 1960s and to the east during the 1970s. The remaining adjoining properties consisted of undeveloped land (south) and Battle Creek Park (west). Based on information discussed below, historic uses of the surrounding properties are not expected to have resulted in the potential for current impact to the Property subsurface.

3.2 Sanborn Fire Insurance Maps

Fire insurance maps were created for insurance underwriters and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks which may have been on a particular property. Review of the Environmental Data Resources, Inc. (EDR) fire insurance map collection indicated that no maps have been prepared for the Property area. A copy of the No Coverage Letter is included in Appendix B.

3.3 Aerial Photographs

Aerial photographs for the Property area were obtained through EDR for the years 1937, 1940, 1947, 1953, 1966, 1974, 1978, 1984, 1987, 1991, 1997, 2005, 2008, 2009 and 2010. Additional aerial photographs for the years 2013 and 2015 were obtained through Google Earth. Copies of the aerial photographs are included in Appendix C.

3.3.1 Past Site Uses

YEAR(S)	USE
1937-1953	Farmland. Note that the eastern portion of the Property is cut off in the 1940 aerial photograph.
1966, 1974	Undeveloped land

YEAR(S)	USE
1978-2015	The current residential improvements were constructed on the Property. Note that the outdoor pool appears filled-in in the 2008 aerial photograph.

No previous uses indicative of environmentally suspect practices or activities were identified on the Property on the aerials reviewed for this assessment.

3.3.2 Past Adjacent Property Uses

1937-1953	
Direction	**Use**
North	Farmland. Note that the north-adjoining properties are cut off in the 1940 aerial photograph.
East	Farmland. Note that the east-adjoining properties are cut off in the 1940 aerial photograph.
South	Farmland
West	Undeveloped land

1966	
Direction	**Use**
North	Undeveloped land followed by residential development
East	Undeveloped land
South	Undeveloped land
West	South Winthrop Street followed by undeveloped land

1974-2015	
Direction	**Use**
North	Hillsdale Avenue followed by residential dwellings
East	Kipling Street South followed by residential apartments
South	Undeveloped land
West	South Winthrop Street followed by undeveloped land part of the larger Battle Creek Park

No previous uses indicative of environmentally suspect practices or activities were identified at the surrounding properties on the aerials reviewed for this assessment.

3.4 City Directories

City Directories provide listings, arranged by street address, of facilities for the year the directory was published. Nova reviewed the Polk's and Cole's City Directories at the St. Paul Public Library for listings in the vicinity of the Property in approximate five-year intervals for the years 1942 through 2016. A summary of information reviewed is included in the following tables.

YEAR(S)	PAST SITE USES
1942-1962	Streets not identified (200 South Winthrop Street and 215 South Kipling Street)
1972	Apartments with numerous residential listings (215 South Kipling Street)
1978-2016	Apartments with numerous residential listings (200 South Winthrop Street and 215 South Kipling Street)

Overall, historic uses of the Property as identified in the city directories are not expected to have resulted in the potential for current impacts to the Property subsurface.

ADJACENT PROPERTY USES IN 1942-1967	
Adjacent to the north	Street not listed (2151-2215 Hillsdale Avenue)
Adjacent to the east	Street not listed (218 South Kipling Street
Adjacent to the south	No listings (no assigned address)
Adjacent to the west	No listings (undeveloped land)

ADJACENT PROPERTY USES IN 1972-2016	
Adjacent to the north	Residential listings (2151-2215 Hillsdale Avenue)
Adjacent to the east	Apartments with numerous residential listings (218 South Kipling Street)
Adjacent to the south	No listings (no assigned address)
Adjacent to the west	No listings (undeveloped land part of the larger Battle Creek Regional Park)

Based on information presented in the city directories, historic uses of surrounding properties are not expected to have resulted in the potential for current impacts to the Property subsurface.

3.5 Local Agency Review

3.5.1 St. Paul Department of Safety and Inspections

Contact Name Source Type Phone Number	Comments
Robert Humphrey 651-266-9123 And building permit files	Nova reviewed permit files with the St. Paul Department of Safety and Inspections as provided by Robert Humphrey. No records of USTs were identified in the permit files. No other permits indicative of environmental issues were identified. Copies of materials from the file are attached as Appendix F.

3.5.2 St. Paul Planning and Economic Development Department

Source Type	Comments
Permit files	Officials with the St. Paul Planning Department directed us to the Department of Safety and Inspections to review building permits for the property.

3.5.3 Ramsey County Recorder's Office/Property Records

Source Type Phone Number	Comments
https://maps.co.ramsey.mn.us 651-266-2000	Nova obtained property records from the Ramsey County GIS website. Copies of materials from the file are attached as Appendix F.

Nova obtained the plat map from the Ramsey County GIS website.

The address of the Property is 200 South Winthrop Street & 215 South Kipling Street, St. Paul, Minnesota. The Property is located in a residential area of the City of St. Paul, Ramsey County. According to the Ramsey County Recorder's Office, the assessor's parcel number (APN) of the Property is 02.28.22.44.0095. The legal description is reproduced below:

South Part of Hillsdale Avenue & West of Kipling Street of SE ¼ of SE ¼ (subject to roads) in Section 2, Township 28N, Range 22W.

Copies of material from the file are attached as Appendix F.

According to the Ramsey County Recorder's Office, a formal, fee-based search would be required to determine if environmentally-related liens or deed restrictions or activity or use limitations (AUL) have been recorded against the Property. No activity or use limitations (AUL) were identified in the Standard government records report (EDR Radius Map Report) for the Property.

3.5.4 St. Paul Fire Department

Source Type	Comments
Permit files	Nova reviewed permit files with the St. Paul Department of Safety and Inspections who maintains fire safety and fire inspection records. No records indicative of UST installations/removals, spills, releases or environmental issues were identified.

3.6 Interviews

The following individuals were interviewed in conjunction with this ESA.

CONTACT NAME	AFFILIATION	DATE INTERVIEWED	COMMENTS
Lea Gilson	Asset Manager with Grand Pre by the Park Apartments	November 30, 2017	Lea Gibson provided access to the improvements and answered questions related to the Property. Information from this interview has been incorporated into the remainder of the assessment.
Robert Humphrey	St. Paul Department of Safety and Inspections	November 30, 2017	Mr. Humphrey provided Department of Safety and Inspection permits for review which included building permits and fire inspection records.

Reasonably ascertainable information from current and/or past Site, and/or tenants of the Property provided no evidence indicative of known or suspect environmental concerns associated with the Property. Information from these interviews appears in various sections of this report depending upon the nature of the information.

Nova encountered data failure by not interviewing the past Site owners, tenants and adjacent property owners, as none were available for comment, did not respond to requests to information, or did not exist. However, based on our review of the available municipal, regulatory and historical information, the absence of information obtained from interviews with these individuals is not considered significant to the findings, conclusions and recommendation of this environmental site assessment (ESA).

3.7 Previous Reports and Proceedings

Lea Gilson, Grand Pre by the Park Apartments Property Manager and Jack Hurley, GreenHead Investments reported no knowledge of any pending, threatened, or past litigation, administrative proceedings, notices of violations, environmental liens, or activity and use limitations concerning the Property relating to hazardous substances or petroleum products.

According to information available to Nova and the Client, previous environmental investigations were conducted for the Property. The following is a summary of the reports reviewed:

Phase I Environmental Site Assessment dated January 18, 2006, prepared by Nova Consulting Group, Inc. for Washington Mutual.

In summary, the 2006 Phase I Environmental Site Assessment (ESA) was prepared in accordance with ASTM E 1527-00 and Fannie Mae protocols for the Grand Pre at the Park Apartments. The 2006 assessment summarized previous sampling and testing results from 1996 and indicated that two soil borings were advanced to depths of 21 feet deep adjacent to the UST to evaluate if a release had occurred. No visual or olfactory evidence of petroleum impacts or elevated organic vapor readings were identified in field screening of the samples collected from the borings. Laboratory analysis of soil samples collected from the soil borings did not identify fuel oil constituents above laboratory detection limits.

The following evidence of recognized environmental conditions was identified in connection with the Property:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail.

The following issues of environmental concern were identified in connection with the Property:

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.

Nova recommended conducting annual tightness and line testing to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

Phase I Environmental Site Assessment dated April 27, 2007, prepared by Nova Consulting Group, Inc. for Hurley Partners Limited Partnership, LLP. and Greenhead Investments, LLC.

The 2007 Phase I ESA was prepared in accordance with ASTM E 1527-05 for the Grand Pre at the Park Apartments. The conclusions of the 2007 Phase I ESA were consistent with the 2006 assessment discussed above.

In addition to recommending continued annual tightness and line testing or soil sampling and analysis to evaluate the UST system, Nova recommended continued maintenance of identified asbestos-containing materials and lead-containing materials in accordance with the Operations and Maintenance (O&M) Plans for the Property.

Phase II Environmental Site Assessment dated April 30, 2007, prepared by Nova Consulting Group, Inc. for Hurley Partners Limited Partnership, LLP. and Greenhead Investments, LLC.

The purpose of the Phase II ESA was to evaluate the soils at the Property for the presence of hydrocarbon impacts associated with the 30,000-gallon heating fuel oil UST at the Property.

In summary, the Phase II ESA consisted of completion of two direct push soil borings (GP-1 and GP-2) and collection of soil samples for analysis for diesel range organics (DRO), and benzene, toluene, ethyl benzene, and xylenes (BTEX). Soil samples were also screened for the presence of organic vapors with a photoionization detector (PID) during advancement of the soil borings. In summary, no elevated organic vapors were detected above the PID detection limits, and chemical analysis of the soil samples did not detect the presence of DRO or BTEX above laboratory reporting limits.

Tank Tightness Testing Results dated November 27, 2017, completed by Minnesota Petroleum.

The tank tightness testing results indicated the tank was tight and no water intrusion was detected.

3.8 Chain of Title Search and Judicial Records Review

Nova was not provided a chain of title by the Client for review as part of this Environmental Site Assessment.

Nova was not requested to review judicial records as part of this Environmental Site Assessment.

3.9 Environmental Lien Search

No records or knowledge of environmental liens was provided to Nova during the course of this assessment. Nova was not requested to conduct an environmental lien search as part of this Environmental Site Assessment.

4.0 SITE RECONNAISSANCE

Melissa Colletti Wong of Nova conducted a reconnaissance of the Property on November 30, 2017, to identify potential recognized environmental conditions in connection with the Property. A diagram of the Property is attached as Figure 2. Selected photographs taken during the Property reconnaissance are included as Appendix E.

Grand Pre by the Park Apartments includes approximately 8.9 acres improved with a three-story, 335,466-square foot, multi-family residential apartment building constructed in 1976. The building offers a total of 216 rental units split between two designated areas of the building identified as Building 200 (western and southern portions) and Building 215 (northern and eastern portions). Access to the asphalt-surfaced Property parking lots of the Property is provided from South Winthrop Street to the west and from South Kipling Street to the east. Grass and landscaping surround the building and parking lots. The general vicinity of the Property is occupied by parks and residences.

4.1 Site Access and Limitations

Lea Gilson, Grand Pre by the Park Apartments Property Manager, provided access to the Property and accompanied Nova during the Property visit. Nova visually and physically observed the periphery of the Property. Nova accessed Units 103, 104, 116, 118, 217, 221, 222, 223, and 328 in Building 200, and Units 239, 249, 255, 256, 337, 339, 363, 368, 444, 447, 450, 455 and 467 in Building 215 for a total of 22 units within the 216-unit apartment building (~10%). Nova also accessed common areas including the fitness room, unused indoor pool room, laundry rooms, resident storage rooms and trash shoot rooms as well as the subgrade parking garages, mechanical rooms and storage closets. Nova observed all exterior areas and property boundaries. Weather conditions at the time of the reconnaissance were sunny with temperatures in the 40 degrees Fahrenheit range.

No significant limitations were encountered during the site reconnaissance.

4.2 Current Operations/Tenants

The property is currently occupied as the Grand Pre by the Park Apartments with numerous multi-family residences.

No operations indicative of known or suspect environmental concern were noted during Nova's reconnaissance. The Property reconnaissance revealed no evidence of significant past leaks or spills or improper use, storage, or generation of hazardous materials expected to have resulted in the potential for current impacts to the Property subsurface.

4.3 On Site Characteristics

Nova observed no evidence of surface water features including wetlands, lagoons, impoundments, pits, ponds, drywells, creeks, pools of liquids, or other bodies of water on the Property. One sump pump was observed in the boiler room in the 200 Building garage. No

evidence of additional sumps or catch basins, other than used for stormwater removal, was observed or reported during the Property reconnaissance. Nova observed no evidence of distressed vegetation, staining or corrosion, dumping of hazardous materials, filled areas, or patched pavement, other than typical parking lot repairs/repaving, on the Property.

4.4 Utilities / Building Systems

The following utilities are provided to the Property:

UTILITY SERVICE	PROVIDER
Potable Water and Sewer	City of St. Paul
Natural gas	Xcel Energy
Electricity	Xcel Energy
Propane	Not applicable

No evidence of potable drinking water wells, sumps, lift stations, or septic systems was observed on the Property. According to the most recent groundwater quality report for St. Paul, the drinking water supply at the Property is in compliance with the EPA's drinking water quality standards. Nova noted no strong, pungent, or noxious odors during the Property visit. No evidence of fueling facilities was observed on the Property.

4.5 Chemical Use and Storage

Chemical storage and/or hazardous materials identified by visual observation of the Property are listed below:

CHEMICAL STORAGE			
Type of Material	Approximate Quantities	Storage Location	Use
Typical household cleaning and building maintenance supplies	Housekeeping – retail size containers.	Janitorial closets (assumed tenants interior closets)	Housekeeping and maintenance
Boiler treatment chemicals	One approximately 5-gallon plastic container	Boiler room	Boiler treatment

No indications of spills, leaks, overflows, or potential routes of entry to the subsurface were observed in association with the storage of these materials. The use and storage of these materials appears to comply with local, state, and federal requirements.

4.6 Waste Generation / Storage / Disposal

Waste generation, storage, and disposal practices identified by visual observation of the Property are listed below:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Type of Material	Source	Storage Location	Disposal
General municipal waste	Site operations	Dumpsters	Contracted waste hauler
Sanitary wastes	Site operations	N/A	Sanitary sewer system

Nova observed no indications of spills, leaks, overflows, or potential routes of entry to the subsurface in association with these materials. The generation, storage, and disposal activities of these materials appear to comply with local, state, and federal requirements.

4.7 Potential PCB-Containing Equipment

Potential PCB-containing equipment identified by visual observation of the Property is listed below:

POLYCHLORINATED BIPHENYLS (PCBS)					
Equipment Type	Quantity	Owner	Location	Observed Leak?	PCB-Containing?
Pad-mounted transformer	Six	Xcel Energy	Perimeter of building	No	Potential
Elevator equipment	Two	Building owner, but serviced by All City Elevator, Inc.	Building interior	No	Unlikely

Six pad-mounted transformers, owned by Xcel Energy, were observed around the perimeter of the apartment building. Based on the post 1977 date of installation, there is a potential for the transformers to contain PCB's. Note that a "Non-PCB" sticker was observed on the pad-mounted transformer located immediately east of the 215 building. No other labels were observed on the remaining transformers. Xcel Energy would be responsible for any maintenance or replacement, provided the cause is not customer misuse. No leaks or staining were observed on or surrounding the transformers.

Two hydraulic elevators were noted at the Property. No leaks or staining were observed on or surrounding the equipment. The site representative indicated new elevator motors were installed approximately three years ago. Based on the post-1979 date of installation, this equipment is not expected to contain PCB's.

4.8 Storage Tanks / Drums

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996 and 2007) and tank tightness testing (2002 and 2017) have not identified indications of a release from the UST. Concurrent to this ESA, a Limited Subsurface Investigation / Phase II Environmental Site Assessment was completed, and a report was prepared under separate cover. A summary of salient findings is described as follows. Three soil borings were advanced surrounding the UST to depths ranging between 21.5 and 26 feet below ground surface (bgs). One of the borings, GP3, was completed as a temporary monitoring well. Soil and groundwater samples were collected from each boring/well for laboratory analysis of volatile organic compounds (VOCs), and diesel range organics (DRO). Analytical results were non detect for VOCs and DRO. Based on the analytical results, the UST system is not considered a REC to the Property; however, the UST system is 40 years old and has reached an age where tanks statistically begin to fail. Additionally, regulatory records

identified the 30,000-gallon UST as "abandoned" while the tank remains in use as a back-up fuel source for the boilers.

Given the age of the UST system, annual tightness and line testing or soil sampling and analysis should be conducted as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents. Additionally, proper documentation should be submitted to the MPCA to update the status of the UST to "Active".

4.9 Asbestos-Containing Building Materials (ACBM)

Historically suspect asbestos-containing building materials noted during the Property visit included flooring and mastic, ceiling tile, textured ceiling plaster, sheetrock and taping compound, and roofing materials. The roof was not observed during Nova's reconnaissance. Prior sampling and testing for asbestos was completed in 1996 and asbestos was detected in textured ceiling plaster from apartment units and hallways. These materials were generally in good condition at the time of Nova's site reconnaissance. Reportedly, an Operations and Maintenance Plan (O&M) was prepared for the Property in 1996. The current site manager, Lea Gilson, was unaware of an O&M Plan in place at the property.

Prior to demolition or renovation activities, previously untested suspect asbestos-containing materials, if identified, that are likely to be impacted should be sampled by a licensed asbestos inspector and analyzed by an accredited laboratory.

4.10 Lead Based Paint

In accordance with the Scope of Services, Nova has conducted a limited, visual evaluation to note the condition of painted surfaces at the Property. Due to the date of construction (1977), lead-based paint may be present. The objective of this visual survey was to note the presence and condition various painted surfaces. Prior sampling and testing completed in 1996 identified lead-containing enamel coating on a bathtub. The identified lead-containing surface was reported to be in good condition and the reports indicated the material is managed in an O&M Plan reportedly in place for the building. In general, the painted surfaces appeared in good condition, as no chalking, peeling or flaking paint was observed.

The Property falls under the definition of *Target Housing,* and is regulated under Title X. The seller or renter of the Property will need to make available a federally approved lead hazard information pamphlet and must disclose known lead-based paint and/or lead-based paint hazards to purchasers and renters of the Property pursuant to the requirements of 24 CFR 35.92 and 40 CFR 745.113.

4.11 Radon

According to the Environmental Protection Agency, the Property is located in Zone 1 of the USEPA's radon designation categories. Zone 1 indicates that the expected radon

concentration of the Property is at or above 4.0 picoCuries per Liter (pCi/L) of air. The USEPA action level for radon is 4.0 pCi/L.

As all apartment units are located above the subgrade parking structures, elevated concentrations of radon gas are not expected to be a health risk to occupants at the Property. Additionally, prior radon sampling was completed in 1996 in the basement leasing office and in one residential unit (Unit #106), located above the subgrade garage. The prior sampling results did not exceed the EPA's action level of 4.0 pCi/L.

4.12 Mold

No evidence of water infiltration or visible mold growth was observed within the occupied areas of the building during Nova's limited visual observation of the Property interior. Observations for mold growth were not intended to represent a comprehensive mold inspection.

4.13 Dry Cleaners and/or Laundry Facilities

No dry-cleaning facilities were present at the Property at the time of our visit. Historical and regulatory information reviewed identified no dry-cleaning facilities on the Property. A shared common laundry room with standard washers and dryers is present in each Property building. No concerns were noted in association with these items.

4.14 Vapor Migration

During the performance of this Phase I ESA, no chemicals of concern have been identified on-Site or offsite that have or likely have impacted the Property. A vapor migration concern is not anticipated for the Property.

4.15 Potential Additional Unidentified Site Concerns

Based on the findings of this ESA, no evidence of potential vapor intrusion conditions was identified.

No radiological equipment was identified at the Property.

Each garage structure features circular floor drains which lead to oil/water separators. We observed the rectangular cleanout access points in each garage. The property manager indicated that only snow-melt enters the drains. No significant staining or evidence of improper disposals to the on-site drains was observed. The oil/water separator installations are not expected to have resulted in impacts to the Property subsurface

No potential additional unidentified Site concerns were identified as a result of this ESA.

4.16 Surrounding Property Observations

General observations of properties adjoining the Property were conducted in conjunction with on-Site observations made November 30, 2017 during Nova's Site reconnaissance and are summarized below.

SURROUNDING PROPERTY OBSERVATIONS		
Direction	Use	Observed Chemical Use/Storage?
North	Hillsdale Avenue followed by residential dwellings	No
East	South Kipling Street followed by Park Apartments	No
South	Undeveloped land	No
West	South Winthrop Street followed by undeveloped land of Battle Creek Park	No

Observations of adjacent properties did not reveal any obvious visual evidence of environmental concerns. The east-adjoining Park Apartments was identified as a closed Leaking Underground Storage Tank (LUST) facility in connection with a release from a fuel oil UST. Refer to Section 5.2 for additional discussion of the adjoining LUST facility. The remaining adjacent properties were not listed on regulatory databases indicative of known or suspected environmental concerns likely to have impacted the Property subsurface.

5.0 REGULATORY REVIEW

Nova reviewed regulatory agency database information compiled by Environmental Data Resources, Inc. (EDR) to help identify recognized environmental conditions in connection with the Property. Unless stated otherwise in this section, the scope of Nova's review is limited to review of the information provided by EDR, and does not include review of regulatory agency files pertaining to specific sites that may have been identified. The regulatory review incorporates the Approximate Minimum Search Distances (AMSDs) as set forth by ASTM plus any additional Client-specific required search distances that may exceed the AMSDs or as deemed applicable by Nova.

The EDR report includes an Orphan list of facilities that could not be precisely located due to inadequate address information. No orphan sites were identified in the EDR Radius Map Report.

The results of the review for each database are discussed below. Databases with listings identified on or in the area of the Property are discussed separately, outside of the table. The locations for the facilities discussed in this section are shown on the figures in the EDR report, included as Appendix F. A detailed description of each regulatory database searched is included in the EDR Report.

The Property was identified on the *Facility Index System (FINDS)* database in connection with one underground storage tank installed on the Property. This database is a tracker database that points to other database listings. Refer to the UST database discussion below for additional detail pertaining to the active UST.

Two (2) *Resource Conservation and Recovery Act Conditionally Exempt Small Quantity Generator (RCRA-CESQG)* facilities were identified within the 0.25-mile search radius. The listings are not on adjoining properties. Based on distance considerations, these two facilities are not expected to have resulted in impacts to the Property subsurface.

Four (4) *RCRA Non Generator (NonGen)* facilities were identified within the 0.25-mile search radius. The listings are not on adjoining properties. Based on distance considerations, these four facilities are not expected to have resulted in impacts to the Property subsurface.

WIMN	0.5 Mile	1	1	27	10	N/A

The Property was identified on the *Underground Storage Tank (UST)* and *What's in my Neighborhood (WIMN)* databases in connection with one active 30,000-gallon heating fuel oil UST installed at the Property. The tank was installed in 1977 during construction of the current improvements and is of steel construction. Note that the EDR Radius Map Report and MPCA online databases indicate the 30,000-gallon UST is abandoned; however, the tank remains in use as a back-up fuel source for the on-site boilers. The UST is located south of the building near the southwest garage door entrance with the vent pipe located further to the south. Previous soil sampling and analysis (1996 and 2007) and tank tightness testing (2002 and 2017) have not identified indications of a release from the UST. Concurrent to this ESA, a Limited Subsurface Investigation / Phase II Environmental Site Assessment was completed, and a report was prepared under separate cover. A summary of salient findings is described as follows. Three soil borings were advanced surrounding the UST to depths ranging between 21.5 and 26 feet below ground surface (bgs). One of the borings, GP3, was completed as a temporary monitoring well. Soil and groundwater samples were collected from each boring/well for laboratory analysis of volatile organic compounds (VOCs), and diesel range organics (DRO). Analytical results were non detect for VOCs and DRO. Based on the analytical results, the UST system is not considered a REC to the Property; however, the UST system is 40 years old and has reached an age where tanks statistically begin to fail. Additionally, regulatory records identified the 30,000-gallon UST as "abandoned" while the tank remains in use as a back-up fuel source for the boilers. Given the age of the UST system, annual tightness and line testing or soil sampling and analysis should be conducted as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be reported to the Minnesota Pollution Control Agency (MPCA) and

investigated/remediated in accordance with MPCA petroleum release investigation guidance documents. Additionally, proper documentation should be submitted to the MPCA to update the status of the UST to "Active".

One (1) *State Hazardous Waste Site (SHWS)* facility was identified within a one-mile radius of the Property. The site is located 0.124-mile to the southeast, in a cross-gradient location. Based on the distance and location considerations, this listing is not expected to have resulted in impacts to the Property subsurface.

Five (5) *Leaking Underground Storage Tank (LUST)* facilities were identified within the 0.5-mile search radius from the Property. The MPCA has issued a closed status for the petroleum releases at all five sites. Of the five sites, four are located greater than one-tenth of a mile from the Property. Based on the regulatory closure status and distance considerations, these four listings are not expected to have resulted in impacts to the Property subsurface. The remaining listing is associated with the east-adjoining property and is discussed in greater detail below:

- The Park Apartments, 215 South McKnight Road is located 30 feet to the east, beyond Kipling Street South. A petroleum release consisting of fuel oil was discovered and reported in November, 1997 and issued closure in February, 1998. No information regarding the presence or absence of groundwater contamination was identified in the EDR Radius Map Report or the MPCA online databases. However, due to the rapid site closure (within three months of discovery), it does not appear that a significant investigation was required to determine the extent of impacts from the release. Additionally, based on the nature of a fuel oil release, significant contaminant migration is unlikely. The likely location of a fuel oil tank would be in close proximity to the 215 South McKnight apartment building, located at least 75 feet from the Property. Based on the aforementioned considerations, including the regulatory closure status and distance from the Property, the listing is not expected to have resulted in impacts to the Property subsurface.

The Property is listed as a UST facility, and was previously discussed above. Four (4) *UST* facilities were identified within the 0.25-mile search radius from the Property. Three of the four sites are not adjoining properties and based on distance considerations, the listings are not expected to have resulted in impacts to the Property subsurface. The remaining listing is associated with the Park Apartments. Based on the above LUST discussion, this listing is not expected to have resulted in impacts to the Property subsurface.

One (1*) Aboveground Storage Tank (AST)* facility was identified within the 0.25-mile search radius from the Property. The site is not an adjoining property and based on the distance from the Property, the listing is not expected to have resulted in impacts to the Property subsurface.

Two (2) *MN Brownfields* facilities were identified within the 0.5-mile search radius from the Property. Both sites are located greater than one-quarter mile from the Property. Based on the distance from the Property, the listings are not expected to have resulted in impacts to the Property subsurface.

Eight (8) *Site Remediation Section (SRS)* facilities were identified within the 0.5-mile search radius from the Property. One of the listings is associated with the above discussed petroleum release at the east-adjoining property. Based on the above LUST discussion, this listing is not expected to have resulted in impacts to the Property subsurface. The remaining seven sites are located at least one-tenth of a mile from the Property. Based on the distance from the Property, the listings are not expected to have resulted in impacts to the Property subsurface.

Thirty-eight (38) *What's in My Neighborhood (WIMN)* facilities were identified within the 0.5-mile radius of the Property. The WIMN database is a compilation of facilities enrolled in various EPA and MPCA programs. Based on any or all of the following conditions - distance, gradient, and/or regulatory status, these facilities are not expected to have resulted in impacts to the Property subsurface.

In addition to the databases identified above, the following surrounding listings were identified within the specified search radii: one (1) *MN Drycleaners* facility, one (1) *Manifest*, one (1) *WI Manifest*, and one (1) *EDR US HIST AUTO STAT* databases. In some cases, these listings were previously discussed above wherein they were determined to not represent a recognized environmental condition. Those facilities not identified previously were determined to not represent a recognized environmental condition based upon any or all of the following considerations: distance, gradient, and/or regulatory status.

6.0 FINDINGS/OPINIONS/CONCLUSIONS

Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2013, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM 1527-2013 standard practice and authorized Scope of Services.

The Property includes approximately 8.9 acres improved with a three-story, 335,466-square foot, multi-family residential apartment building constructed in 1976. The building offers a total of 216 rental units split between two designated areas of the building identified as Building 200 (western and southern portions) and Building 215 (northern and eastern portions). Access to the asphalt-surfaced Property parking lots of the Property is provided from South Winthrop Street to the west and from South Kipling Street to the east. Grass and landscaping surround the building and parking lots.

The Property is situated within a residential area of the City of St. Paul. The Property is bound to the west by South Winthrop Street, followed by Battle Creek Park; to the north by Hillsdale Avenue, followed by residential dwellings; to the east by South Kipling Street followed by the Park Apartments; and to the south by undeveloped land followed by the Battle Creek Bike Trail.

The available historical information indicates the Property was developed as farmland by at least 1937 until the late 1950s or early 1960s when the Property was left vacant and fallow. The Property remained vacant land until the current residential improvements were constructed in 1976. Since 1976, the Property has been occupied by residential apartments. The following addresses were determined to have historically corresponded to the Property: 200 South Winthrop Street and 215 Kipling Street South. Overall, historic uses of the Property are not expected to have resulted in the potential for current impacts to the Property subsurface.

Surrounding properties were generally cultivated farmland from at least 1937 through the 1950s. Residential development began to the north during the 1960s and to the east during the 1970s. The remaining adjoining properties consisted of undeveloped land (south) and Battle Creek Park (west). Based on information discussed below, historic uses of the surrounding properties are not expected to have resulted in the potential for current impact to the Property subsurface.

Nova has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-13 of Grand Pre by the Park Apartments property located at 200 South Winthrop Street & 215 South Kipling Street, St. Paul, Minnesota 55119, the Property. Any exceptions to or deletions from this practice are described in Section 1.6 of this report. This assessment has revealed no evidence of recognized environmental conditions (RECs), controlled recognized environmental conditions (CRECs) or historical recognized environmental conditions (HRECs) associated with the Property except for the following:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996 and 2007) and tank tightness testing (2002 and 2017) have not identified indications of a release from the UST. The UST system is 40 years old and has reached an age where tanks statistically begin to fail. A Phase II Environmental Site Assessment was completed concurrent to this assessment and the results are presented under a separate cover.

No other evidence of RECs/CRECS and/or HRECs were identified in association with the Property or surrounding properties.

The following items of environmental concern were noted that warrant mention:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996 and 2007) and tank tightness testing (2002 and 2017) have not identified indications of a release from the UST. Concurrent to this ESA, a Limited Subsurface Investigation / Phase II Environmental Site Assessment was completed, and a report was prepared under separate cover. A summary of salient findings is described as follows. Three soil borings were advanced surrounding the UST to depths ranging between 21.5 and 26 feet below ground surface (bgs). One of the borings, GP3, was completed as a temporary monitoring well. Soil and groundwater samples were collected from each boring/well for laboratory analysis of volatile organic compounds (VOCs), and diesel range organics (DRO). Analytical results were non detect for VOCs and DRO. Based on the analytical results, the UST system is not considered a REC to the Property; however, the UST system is 40 years old and has reached an age where tanks statistically begin to fail. Additionally, regulatory records identified the 30,000-gallon UST as "abandoned" while the tank remains in use as a back-up fuel source for the boilers.

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.

RECOMMENDATIONS

Based on the findings of this Phase I Environmental Site Assessment, Nova recommends the following:

- Given the age of the UST system, annual tightness and line testing or soil sampling and analysis should be conducted as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated

in accordance with MPCA petroleum release investigation guidance documents. Additionally, proper documentation should be submitted to the MPCA to update the status of the UST to "Active".

- Continued maintenance of identified asbestos-containing and lead-containing materials in accordance with the reported Operations & Maintenance (O&M) Plans for the Property.

7.0 STANDARD OF CARE

The services performed by Nova Consulting Group, Inc. on this project have been conducted with that level of care and skill ordinarily exercised by reputable members of the profession, practicing in the same locality, under similar budget and time constraints.

By signing this report, we declare that, to the best of our professional knowledge and belief, we meet the definition of Environmental Professional as defined in §312.10 of 40 CFR §312. We have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the subject property. We have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312. No other warranty is expressed or intended.

This report is exclusively for the use and benefit of those listed on the title page of this report and may not be relied upon by any other person or entity without written permission from Nova.

APPENDIX A

RESUMES

MELISSA COLLETTI WONG
NOVA ASSOCIATE

PROFESSIONAL EDUCATION

B.S. Environmental Science, University of Minnesota – Twin Cities, Minneapolis-St. Paul, MN, 2009

CERTIFICATIONS/QUALIFICATIONS

- AHERA Asbestos Inspector, No. AI11546
- Environmental Professional (EP) in Accordance with ASTM E1527-13
- Environmental Site Assessment Experience, 7+ years
- Multifamily ESA Experience, 7+ years

SELECTED EXPERIENCE

Ms. Wong has over seven years of consulting experience in the environmental industry throughout the United States. She has conducted Environmental Site Assessments (ESAs) and Property Condition Assessments (PCAs) for a wide range of local and national clients, including government agencies, banks, agency lenders, investment banks, life companies, law firms and property owners. The properties she has evaluated have included multifamily residential, retail, office, industrial and hospitality.

Ms. Wong has provided hundreds of environmental site assessments in accordance with ASTM E1527, the USEPA All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines, HUD guidelines, and other client specific scopes of work. Her environmental background includes a detailed understanding of the risks associated with hazardous and regulated materials storage, use generation and disposal, above ground and underground storage tanks, polychlorinated biphenyls (PCBs), asbestos-containing materials (ACM), lead-based paint (LBP), mold and radon. Ms. Wong has managed numerous subsurface investigations to assess the horizontal and vertical extent of soil and groundwater contamination and has provided oversight services to environmental remediation projects.

GINA B. COLETTA
ENVIRONMENTAL PROFESSIONAL (E.P.)
NATIONAL PRACTICE LEADER

PROFESSIONAL EDUCATION

St. Olaf College, Northfield, Minnesota, Bachelor of Arts in Biology, 1994

CERTIFICATIONS/QUALIFICATIONS

- EPA Environmental Professional
- HUD PCNA Training Addressing Accessibility in Capital Needs Assessments - Identifying Accessibility Problems and Remedies, US Department of Housing and Urban Development, Washington, DC
- MN/AHERA Certified Asbestos Building Inspector
- NIOSH #582, Phase Contrast Microscopy Certification
- 40 Hour HAZWOPER
- Asbestos Management Planner
- Phase II ESA Procedures and Reporting Training, Nova Training Center
- HUD-MAP Training, Minneapolis HUD Offices
- Termite and Wood Destroying Pests Training, Nova Training Center

SELECTED EXPERIENCE

Ms. Coletta is the National Practice Leader of the Environmental Assessment Departments for all Nova offices. As the National Practice Leader, Ms. Coletta has a working knowledge of ASTM, AAI, each client's environmental due diligence requirements, including national lenders, bankers, brokers, insurance companies, real estate companies, HUD MAP, and, accordingly, ensures the adherence to their requirements, thereby ensuring and maintaining high client quality. She is responsible for the development and implementation of the Client specific reports. She manages and directs investigations for national and local clients, is a head technical reviewer of environmental reports, and is a client liaison. Furthermore, Ms. Coletta is responsible for mentoring of all new ESA field staff.

Ms. Coletta provides environmental and technical advice on real estate transactions for private and commercial, residential, industrial, and government subsidized properties. Projects range from single properties to multi-site, multi-state portfolios. Ms. Coletta has over twenty-two (22) years experience in the environmental/architectural due diligence field, and has performed and managed thousands of Phase I ESA projects during her career, including, but not limited to management of multi-Site portfolios for a multitude of clients, in accordance with ASTM E1527, the USEPA All Appropriate Inquiry rules, Fannie Mae Delegated Underwriting Standards, Freddie Mac guidelines, HUD guidelines, and other client specific scopes of work.

Ms. Coletta has conducted numerous Property Condition Assessments for multifamily residential housing properties, commercial properties including, but not limited to, retail facilities and office buildings throughout the country, in accordance with ASTM 2018, Fannie Mae and Freddie Mac guidelines.

She has performed and directed numerous asbestos building surveys. She has also conducted noise analyses and electromagnetic frequency assessments. She is proficient in mold and radon testing investigations.

PROJECT MANAGEMENT/MULTI-SITE PORTFOLIOS:

Managed several large multi-site portfolios, including, but not limited to: a 150-site portfolio of manufactured homes; several large portfolios of resort properties throughout the United States; a large portfolio of hospital and health care facilities, and a multi-hotel site portfolio. Developed scopes of work, mentored field personnel, and identified environmental risks. Tasks completed that are typical for portfolio management include: excellent written and verbal communication skills, effective communication of environmental risks, findings and conclusions and providing effective risk-based results for multiple demanding client groups.

MAEGAN DUNN
ENVIRONMENTAL PROFESSIONAL (E.P.)
SENIOR PROJECT MANAGER

PROFESSIONAL EDUCATION

Bachelor of Science, Environmental Science, University of Wisconsin – River Falls, River Falls, Wisconsin – December 2005

CERTIFICATIONS/QUALIFICATIONS

- Environmental Professional (E.P.) as defined by ASTM Standard E1527-13
- OSHA 40 Hour Hazardous Waste Operations Certification (29CFR 1910.120)
- U.S. EPA Certified Asbestos Building Inspector Certification, No. B11-H12-2038-03

SELECTED EXPERIENCE

Ms. Dunn is a Senior Project Manager with more than ten years of professional experience in the environmental consulting industry. In this capacity, she is responsible for conducting and managing Phase I Environmental Site Assessments (ESAs), Phase II subsurface investigation, hazardous materials inspections and other related services for various clients ranging from private owners/investors, governmental agencies, lending institutions, real estate investment trusts and attorneys. Her experience includes the assessment of various types of real estate including development land, agricultural, commercial, medical, retail, single and multifamily residential, hospitality and industrial. Ms. Dunn maintains expertise in environmental rules and regulations pertaining to the environmental consulting industry including ASTM E1527, USEPA All Appropriate Inquiry Rules and client specific scopes of work including Freddie Mac and Fannie Mae Underwriting Standards.

As a Senior Project Manager, Ms. Dunn managed the environmental and ecological due diligence requirements for a national development company in which approximately 30 acres of agricultural/undeveloped land was acquired for future development of a warehouse/distribution center. Ms. Dunn oversaw the completion of an expanded-scope Phase I ESA that identified potential sensitive wetland features and ecological resources at the subject property. As these features were determined to be located within the proposed building area, Ms. Dunn coordinated third-party vendors to assess these features, develop mitigation plans and obtain proper permitting to ensure compliance with local, state and federal requirements; all within the client's proposed construction schedule.

In addition to her environmental consulting experience, Ms. Dunn served as an Environmental Risk Manager for a mid-sized, regional lending institution in the Midwest. Her directive in this role was to provide environmental risk management for real estate-secured commercial and agricultural loans in accordance with internal bank policies, regulator expectations and acceptable industry standards. Her responsibilities included the collection, analysis and interpretation of environmental data followed by consultation with lending staff regarding potential environmental risks that may result in detrimental impacts to the institution. Ms. Dunn also engaged with third-party environmental consulting firms to provide appropriate due diligence reports including Phase I and Phase II Environmental Site Assessments, when needed. Third-party reports were reviewed by Ms. Dunn to assist in the determination of risk; specifically as it related to detrimental impacts to the real estate value based on potential/confirmed environmental conditions.

MARK A. PERRY
VICE PRESIDENT – CORPORATE REGIONAL MANAGER

PROFESSIONAL EDUCATION

1993	St. Cloud State University St. Cloud, Minnesota	Bachelor of Science Degree: Earth Science - Geology
1988-90	Gustavus Adolphus St. Peter, Minnesota	College Major Studies: Secondary Education-Earth Science

CERTIFICATIONS/QUALIFICATIONS

- Asbestos Building Inspector (Minnesota Department of Health No. AI9224)
- Asbestos Management Planner (Minnesota Department of Health No. AM9224)
- OSHA 40-hour Hazardous Waste Operations Standard (29 CFR 1910.120)

SELECTED EXPERIENCE

Mr. Perry has more than 20 years of experience conducting and managing environmental investigations and property site assessments for private, commercial and industrial business clients, property management/real estate development companies and state/local government agencies (i.e. MNDOT, Hennepin County, and City of Minneapolis). Mr. Perry has conducted Phase I Environmental Site Assessments (ESAs) {including various scope-specific studies (i.e. HUD, Freddie Mac and Fannie Mae) and right-of-way corridor assessments}, Phase II Subsurface and Remedial Investigations, Asbestos and Hazardous Materials Building Surveys; and, prepared Asbestos Operations and Maintenance (O&M) Plans. Mr. Perry has also coordinated and managed the completion of ASTM-Scope Property Condition Assessments (PCAs), HUD Project Capital Needs Assessments (PCNAs), and various scope Physical Needs Assessments (PNAs). In addition to assessment/investigation activities, Mr. Perry has managed the implementation of various active soil and ground water remediation technologies including hazardous waste characterization and disposal coordination, and coordinated geotechnical evaluations for proposed retail development projects. Mr. Perry has continually maintained expertise in environmental compliance, rules and regulations, and coordinated project financing through the Petrofund, Dry Cleaner Reimbursement Fund, Tax-Increment Financing (TIF) and grant programs administered by Hennepin County, Metropolitan Council and Department of Employment & Economic Development (DEED).

In addition to project management, Mr. Perry has extensive field experience pertaining to subsurface contamination investigation and remediation at brownfield redevelopment properties, right-of-way expansions, petroleum retail and dry cleaning facilities, housing developments and natural gas compressor/booster stations. Mr. Perry has coordinated the implementation of active remediation technologies including soil vapor extraction, free product recovery and soil removal and disposal, and maintained air sparge and vent, soil vapor extraction and ground water pump and treatment corrective action systems. Mr. Perry has installed soil borings, temporary monitoring wells and vapor extraction points using a Geoprobe® hydraulic push probe; and, installed, developed and sampled ground water monitoring wells. Mr. Perry also has experience performing groundwater aquifer parameter tests, laboratory soil tests including Atterberg limits, proctor, sieve and hydrometer analyses, and surveying.

EQUIPMENT

Photoionization detectors (HNu, Thermo Instruments, RAE Systems), flame-ionization detectors, Lumex® mercury vapor analyzer, Geoprobe® hydraulic sampling units, combustible gas meters, submersible and peristaltic pumps, pressure transducers, aquifer parameter meters

ST. PAUL ZONING BOARD

TO: Department of Community Services
Division of Housing and Building Enforcement

A Special Use Permit has been approved for the facility as indicated below. Two extra copies of the final plan are attached for your records.

Date : February 18, 1976

Zoning File number: 7464

Applicant's name : Ted Glasrud Associates, Inc.

address: 151 E. County Rd. B2, St. Paul

Purpose : 383-car parking lot

Location : Ss Hillsdale btn Winthrop and Kipling

Legal description : On file

02-28-22-44-0095

200 Winthrop St. S.

Plans approved : January 29, 1976

Final plans dated received : January 29, 1976

Comments :

SPECIAL USE PERMIT APPROVAL

UNIFORM LAND USE CONFIRMATION FORM

(Information to be supplied by person requesting information)
(submit 2 copies of this form)

A. **Subject Property:** The Grand Pre Apartments, 200 South Winthrop Street, St. Paul, Minnesota 55119

B. **Legal Description:** See **Exhibit A** attached hereto.

C. **Property Tax ID #:** 02-28-22-44-0095

D. **Person Requesting Information:**

John M. Giblin
Lommen, Abdo, Cole, King & Stageberg, P.A.
80 South Eighth Street, #2000
Minneapolis, MN 55402-2119

E. **Telephone:** 612/336-9336

F. **Response Requested by:** _____

G. **The use of the Subject Property is described as:** (Be specific and describe the project located or to be located on the Subject Property):office/marina/parking lot

216 Unit Rental Apartment Complex

(Information to be Supplied by Municipality)

1. The Subject Property is designated in the Comprehensive Plan as: Residential Multi-Family

2. The current zoning classification for the Subject Property is: RM2, Residential Multi-Family

3. There are X /are no _____ applications filed for the Property (e.g., zoning, subdivision, special use permit, conditional use permit, variance site plan approval, etc.) (For a brief description of filed applications, see Comments.)

4. The use of the Property as described in paragraph G, above, is:

		Yes	No
a.	Permitted	X	
b.	Conditional (see Comments or attached documentation)	X	
c.	Nonconforming (see Comments)		X

(This section will not be completed if detailed information not supplied in paragraph G, above.)

5. There are records in the City files of unsatisfied zoning violation(s) If yes is checked, see Comments. ____ X

6. Variances have been granted for the Property (Documentation attached) ____ X

7. Flood Insurance Rate Map (FIRM):
Property appears to be in zone(s) ___, X
Community Panel No. 2752480042F dated 4.2.03

8. Applicable setbacks for the property are as follows: for new construction, existing is considered grandfathered
Front: 25 feet or the block avcrage
Rear: 25 feet
Side: 1/2 the height of the building

9. Comments: Special Use Permit #7464 was granted on 2.18.1976 for the parking lot and Conditional Use Permit #03-321016 was granted on 8.11.03 for a cell phone antenna. Conforming to all codes at time of construction.

10. This information was researched by the undersigned, on request, [illegible]. The undersigned certifies that the above information in paragraphs 1-9 is believed to be accurate based on or relating to the information supplied in paragraphs A, B, C and G; however, neither the undersigned nor the City assumes liability for errors and omissions. All information was obtained from public records which may be inspected during regular business hours.

Minneapolis, Minnesota 55402

RE Petroleum Tank Release Site File Closure
Site. Park Apartments, Kipling Building, 215 South McNight Road, St Paul
Site ID# LEAK00011000

Dear Mr Brandts

We are pleased to let you know that the Minnesota Pollution Control Agency (MPCA) Tanks and Emergency Response Section (TERS) staff has determined that your investigation and/or cleanup has adequately addressed the petroleum tank release at the site listed above. Based on the information provided, the TERS staff has closed the release site file

Closure of the file means that the TERS staff does not require any additional investigation and/or cleanup work at this time or in the foreseeable future Please be aware that file closure does not necessarily mean that all petroleum contamination has been removed from this site However, the TERS staff has concluded that any remaining contamination, if present, does not appear to pose a threat to public health or the environment

The MPCA reserves the right to reopen this file and to require additional investigation and/or cleanup work if new information or changing regulatory requirements make additional work necessary. If you or other parties discover additional contamination (either petroleum or nonpetroleum) that was not previously reported to the MPCA, Minnesota law requires that the MPCA be immediately notified

You should understand that this letter does not release any party from liability for the petroleum contamination under Minn Stat ch 115C (Supp 1997) or any other applicable state or federal law In addition, this letter does not release any party from liability for nonpetroleum contamination, if present, under Minn Stat ch 115B (1996), the Minnesota Superfund Law.

Because you performed the requested work, the state may reimburse you for a major portion of your costs The Petroleum Tank Release Cleanup Act establishes a fund which may provide partial reimbursement for petroleum tank release cleanup costs This fund is administered by the Department of Commerce Petro Board Specific eligibility rules are available from the Petro Board at 612/297-1119 or 612/297-4203

If future development of this property or the surrounding area is planned, it should be assumed that petroleum contamination may still be present If petroleum contamination is encountered during future development work, the MPCA staff should be notified immediately

For specific information regarding petroleum contamination that may remain at this leak site, please call the TERS File Request Program at 612/297-8499 The MPCA fact sheet #3 35 *Leak/Spill and Underground Storage Tank File Request Form* (August 1997) must be completed prior to arranging a time for file review

Thank you for your response to this petroleum tank release and for your cooperation with the MPCA to protect public health and the environment If you have any questions regarding this letter, please call me at 612/297-8366

Sincerely,

Elizabeth Clysdale
Project Manager

1.0 PROJECT SUMMARY

1.1 Purpose

Name of property or transaction:	Grand Pre by the Park Apartments
Property Description:	8.9-acre parcel occupied by one four-story apartment building containing 216 units. A parking garage occupies the majority of the first level of the building. Exterior areas are occupied by surface parking areas, an outdoor pool area, two picnic areas, and landscaped areas.
Date of initial contact from client:	January 4, 2006
Name and location of client:	Mr. Enrique Garcia, Washington Mutual, Irving, Texas
Description of assignment:	Phase I Environmental Site Assessment
Important dates:	Report due January 19, 2006
Rationale for Phase I:	Determine the potential for environmental concerns at the Site.

Nova understands that this Environmental Assessment is being conducted to assist in making a determination regarding monetary transaction on this property.

1.2 Scope of Services

Nova's Scope of Services for this Phase I EA conforms with the American Society for Testing and Materials (ASTM) due diligence standards detailed in the ASTM document "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM designation E1527-00) and Fannie Mae DUS guidelines. The Fannie Mae Checklist is attached as Appendix A. There were no exceptions to or deletions from these practices, unless otherwise noted in the text of this report.

Services provided for this project included:

- A review of readily available topographic, geologic, and hydrogeologic information pertaining to the Site and surrounding area;
- A review of readily available information regarding historical land use activities at the Site and interviews with people that have knowledge regarding the past or current uses of the Site;
- A reconnaissance of the Site to visually characterize and observe the Site for present or potential environmental hazards;
- A limited review of federal, state, and local regulatory information for reported potential environmental hazards on or in the vicinity of the Site; and

- Placement, collection and laboratory analysis of charcoal canisters to determine the potential presence of radon gas.

This Phase I Environmental Assessment does not constitute a regulatory compliance audit of the Site; however, any obvious issues of noncompliance are noted in the report.

1.3 Key Findings

The Site addresses are 200 South Winthrop Street and 215 South Kipling Street in St. Paul, Ramsey County, Minnesota. The Site is located at approximately 44.9349 degrees north latitude and 93.0085 degrees west longitude on the USGS St. Paul East, Minnesota 7.5-minute topographic quadrangle map. The Site is an 8.9-acre parcel occupied by one four-story apartment building containing 216 units. A parking garage occupies the majority of the first level of the building. Exterior areas are occupied by surface parking areas and landscaped areas.

Historical sources indicate the Sites current improvement took place in 1977, prior to which the Site was farmland or undeveloped land.

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

The regulatory database review identified the Site as a registered UST facility as discussed above. Facilities identified in the surrounding area are not expected to have impacted subsurface conditions at the Site based on distance, ground water flow, and/or regulatory status considerations.

Prior asbestos sampling and analysis performed at the Site identified asbestos in the textured ceiling plaster in select locations within the building. These materials were generally in good condition at the time of Nova's Site reconnaissance and an Asbestos Operations and Maintenance (O&M) plan was prepared for the Site in 1996. Other materials sampled in 1996 (thermal system insulation) did not contain detectable asbestos.

Previous lead-based paint sampling at the Site identified lead in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

Two charcoal test vials were utilized to determine the potential presence of radon gas. The vials were placed in the rental office and Apartment 106. Analysis of the test vials indicated concentrations of less than 0.5 and 2.0 picoCuries per liter of air, which is below the EPA action level of 4.0 picoCuries per liter of air.

1.4 Conclusions/Recommendations

This assessment has not revealed evidence of recognized environmental conditions at the Site, except the following:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail.

This report has identified the following items of environmental interest at the Site.

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.

In conjunction with the findings of this assessment, Nova recommends the following:

- Conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

2.0 PROPERTY DESCRIPTION

2.1 Site Location

The Site is located in the City of St. Paul, Minnesota. The United States Geological Survey (USGS) topographic map of the Site area, with the Site location marked, and a diagram of the Site are included as Figure 1 and 2, respectively.

2.2 Site Description/Current Use

The Site currently operates as a multi-family apartment complex. The Site is improved with one four-story apartment building containing 216 apartment units; an indoor and outdoor pool, sauna, exercise room, two laundry rooms per floor, a game room, management office and a heated parking garage occupying the majority of the first level of the building. Exterior areas are occupied by asphalt-paved surface parking lots and drive areas; two picnic areas, and grass and landscaped areas.

2.3 Utilities and Building Systems

The Site is supplied with municipal water and sanitary sewer service from the City of St. Paul. No septic systems or water wells were noted on-Site. The units are heated by a central natural gas-fired boiler system with fuel oil backup (the UST system associated with the boiler system is discussed in Section 5.1) and individually cooled by separate, through wall, air conditioning systems located within each apartment.

Several sump pump systems were observed in the lower level of the building. The sumps are presumed to be connected to the municipal sewer system. No indications of odors, corrosion, or other unusual conditions indicative of potential environmental concerns were noted in this area.

The garage area is equipped with two oil/water separators designed to filter any vehicle fluids from automobile rain and snow melt water prior to discharge to the municipal sewer system. Site personnel indicated the separators are cleaned on an as-needed basis by a contracted sewer service firm. No evidence of environmental concern was observed in association with these installations.

2.4 Topography

Based upon a review of the USGS 7.5-Minute St. Paul East, Minnesota Topographic Map dated 1993, the Site is located approximately 885 to 925 feet above mean sea level (amsl). The Site and surrounding areas generally slope to the southwest.

Nova observed no evidence of on-Site surface water features including lagoons, impoundments, pits, ponds, drywells, creeks, or other bodies of water. Nova observed no evidence of excavations, distressed vegetation, stained surface soils, dumping of hazardous materials, old foundations, or filled areas on Site.

2.5 Geologic Setting

Published geologic maps indicate surficial soils in the Site area consist of Superior Lobe glacial till deposits composed primarily of clay and sandy clay. The first bedrock underlying the Site area is Ordovician geologic age sandstone of the St. Peter Formation. The estimated depth to bedrock in the Site area is 100 to 150 feet below the surface.

2.6 Area Hydrogeology

Based on review of the Ramsey County Geologic Atlas, the estimated depth to ground water is 30 to 50 feet below the surface. Review of ground water depth contour information indicates a southwesterly ground water flow direction in the Site vicinity. Regionally, ground water flow is expected to be southwesterly toward the Mississippi River, subject to local variations. Site specific ground water flow conditions may be impacted by a variety of factors including, but not limited to, local topography, geologic anomalies, utilities, nearby wells or sumps, and local drainage patterns. Site specific ground water information would require a ground water investigation that is beyond the scope of this EA.

2.7 Flood Plain

Review of the Federal Emergency Management Agency (FEMA) *Flood Insurance Rate Map*, *St. Paul, MN (Panel Number 2752480042F)*, indicated that the Site is located in flood zone X – minimal flood hazard area.

2.8 Water Wells

Ms. Leslie Gilpin, Site property manager, indicated there are no on-Site wells as the Site is provided water by the City of St. Paul. Additionally, no indicators of the presence of a groundwater well were observed on the Site.

2.9 Current Operations/Tenants

The current operation of the Site (since its first construction in 1977) has been as multi-family residential complex. No operations indicative of environmental concern were identified at the Site in conjunction with this ESA.

3.0 HISTORICAL RECORDS REVIEW

The available historical information indicates the Site was undeveloped land from at least 1937 until 1977 when the residential complex was first developed.

3.1 Fire Insurance Maps

Review of historic fire insurance map collections indicate that fire insurance maps have not been prepared for the Site and adjoining properties. A copy of the No Documentation letter is included as Appendix B.

3.2 Aerial Photographs

Aerial photographs of the Site area were available from the Wilson Library at the University of Minnesota and http://www.globexplorer.com for the years 1937, 1940, 1953, 1957, 1974, 1980, 1991 and 2004. Copies of selected aerial photographs are included as Appendix C.

1937 through 1957
The Site appears to be cultivated farmland and undeveloped land. Adjacent properties are undeveloped land or cultivated farmland.

1974
The Site remains undeveloped land. Adjacent to the north, Hillsdale Avenue and residences are visible. Adjacent to the east, Kipling Street and buildings corresponding to the current apartments are visible. Adjacent to the south, undeveloped land is visible. Adjacent to the west, Winthrop Street and undeveloped land are visible.

1991 and 2004
The current building is visible at the Site. Adjacent properties appear unchanged.

Nova's review of historical aerial photographs did not identify obvious evidence of potential environmental concerns on the Site or adjacent properties.

3.3 City Directories

City Directories provide listings, arranged by street address, of businesses and residences for the year in which the directory was published. City directories for the years 1930, 1940, 1950, 1960, 1970, 1976, 1977, 1985-1986, 1995-1996, and 2005 were reviewed at the St. Paul Public Library. A summary of information reviewed is included in the following tables.

Year(s)	*Property Use*
1930-1960	No listings were identified corresponding to the Site or adjacent properties
1970 and 1976	No listings identified corresponding to the Site. Apartments are listed to the east of the Site and residences are listed to the north of the Site.
1985 through 2005	Site addresses are listed as apartments. Surrounding property use is unchanged from 1976.

Nova's review of historical city directories did not identify obvious indications of potential environmental concerns at the Site or surrounding properties.

3.4 Local Agency Record Review

3.4.1 City of St. Paul

Review of available file information indicated the original building permit for the Site was dated January 13, 1976 with various permits issued at later dates for miscellaneous repair and installation activities. No permits indicating the installation or removal of USTs was noted in the available file information. The Site is zoned RM2-Multifamily Residential.

3.5 Interviews

The following individual was interviewed in conjunction with this ESA:

Interviewee	**Organization**
Leslie Gilpin	Property Manager
Site maintenance personnel	Grand Pre by the Park Apartments
Desk Clerk	St. Paul Licensing, Inspections, and Environmental Protection Department

Information appears in various sections of this report, depending upon the nature of the information.

3.6 Previous Reports

Nova previously completed the following report for the Site:

> *"Phase I Environmental Assessment and Limited Subsurface Investigation, Grand Pre by the Park Apartments, 200 South Winthrop Street and 215 South Kipling Street, St. Paul, Minnesota"*; dated September 5, 1996. The report is summarized below.

Available historical information indicated the Site was historically undeveloped prior to construction of the existing apartment building at the Site.

Sampling and analysis of building materials identified asbestos in samples of textured ceiling plaster from apartment units and hallways. The report recommended development of an Operations and Maintenance Program to maintain these materials.

A 30,000-gallon heating oil UST was identified at the Site. At the time of the 1996 report, the UST at the Site was not registered with the MPCA. Two soil borings were placed to depths of 21 feet adjacent to the UST to evaluate subsurface conditions in the area. No visual or olfactory evidence of petroleum impacts or elevated organic vapor readings were identified in field screening of the samples collected from the borings. Laboratory analysis of soil samples collected from the borings did not identify fuel oil constituents above laboratory detection limits.

No facilities expected to have impacted subsurface conditions at the Site were identified in the regulatory database review.

The report recommended: registration of the UST with the MPCA, determination of PCB content of light ballasts prior to disposal, and proper disposal of used fluorescent and HID light tubes.

Nova was also provided with the following previous reports which are summarized below.

> *"Environmental Site Assessment of Grand Pre Apartments, 200 South Winthrop Street, St. Paul, Minnesota"*; prepared by ATC Associates, Inc., dated December 28, 2001.

The findings of the report were consistent with the 1996 report. The report recommended integrity testing of UST and ongoing operations and maintenance for the previously identified asbestos-containing materials.

> *HUD Lead-Based Paint Inspection/Risk Assessment Report for Grand Pre by the Park Apartment Complex, Located at 200 South Winthrop, St. Paul, Minnesota"*, prepared by Midwest Environmental Consulting, L.L.C., dated April 26, 2005.

Paint sampling was conducted in 48 locations throughout the Site. Lead was identified in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

4.0 REGULATORY AGENCY RECORDS SEARCH

Nova reviewed regulatory agency database information compiled by Environmental Data Resources, Inc. (EDR) to help identify recognized environmental conditions in connection with the Site. Unless stated otherwise in this section, the scope of Nova's review is limited to review of the information provided by EDR, and does not include review of regulatory agency files pertaining to specific sites that may have been identified.

The EDR report includes an Orphan list of facilities that could not be precisely located due to inadequate address information. Nova reviewed this list and determined where these facilities are located relative to the Site. *None of the Orphan listings are located on the Site.* The information was incorporated into the discussion of the appropriate database. Additionally, Nova's field survey verifies the locations of EDR-identified facilities in relation to the Site, and, if necessary, adjusts their distances and directions with respect to their actual locations.

The results of the review for each database are discussed below. Databases with listings identified on or in the area of the Site are discussed separately, outside of the table. The locations for the facilities discussed in this section are shown on the figures in the EDR report, included as Appendix D. A detailed description of each regulatory database searched is included in the EDR Report.

4.1 Federal Agency Record Review

Database Searched?	Distance Searched	Site Listings?	Adjacent Listings?	Listings w/in 0.25-Mile?	Listings w/in 0.25–0.50-Mile?	Listings w/in 0.5-1.0 Mile?

The Site was not identified on any of the federal databases reviewed.

Two ***RCRIS-SQG*** facilities were identified within a 0.25-mile radius of the Site. None of these facilities were identified on other databases indicative of the occurrence of releases or documented or suspected environmental impacts. Additionally, the identified facilities are located at least 0.15 mile from the Site. Based on the foregoing information, the identified facilities are not expected to have impacted subsurface conditions at the Site.

4.2 State Agency Record Review

The Site was identified on the ***UST*** database. Review of available information indicates the UST is 30,000 gallons in size and was installed in 1977 and is constructed of steel. The UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

Two additional ***UST*** facilities were identified within a 0.25-mile radius of the Site. The identified facilities were concurrently identified on the LUST database and are discussed below.

Three ***LUST*** facilities were identified within a 0.5-mile radius of the Site. These facilities are located at least 0.15 mile from the Site and the files for the releases at all of these facilities have been designated as closed by the MPCA, indicating the releases were investigated and, if necessary, remediated to the satisfaction of the MPCA and do not represent a threat to human health or the environment. Based on their regulatory status and distance from the Site, these facilities are not expected to have impacted subsurface conditions at the Site.

5.0 SITE RECONNAISSANCE

Mr. Thomas J. Panning of Nova conducted a reconnaissance of the Site on January 11, 2006 to visually inspect the Site for present or potential environmental hazards. A diagram of the Site is included as Figure 2. Selected photographs taken during the Site reconnaissance are attached in Appendix E.

Ms. Leslie Gilpin, the on-Site property manager for Grand Pre by the Park Apartments, provided access to 10% of the tenant spaces, common areas, mechanical, storage, and maintenance areas. Nova was accompanied by Site maintenance personnel during the Site visit.

5.1 Storage Tanks and Petroleum Pipes

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

5.2 Lead-Based Paint (LBP)

Nova was provided with previous LBP sampling documentation. The sampling report indicated that paint sampling was conducted in 48 locations throughout the Site. Lead was identified in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead. Painted surfaces observed at the time of Nova's Site reconnaissance were generally in good condition.

5.3 Asbestos-Containing Building Materials (ACBMs)

Historically suspect asbestos-containing building materials observed at the Site included flooring and mastic, textured ceiling plaster, sheetrock and taping compound, and roofing materials. Prior asbestos sampling and analysis performed at the Site identified asbestos in the textured ceiling plaster in select locations within the building. These materials were generally in good condition at the time of Nova's Site reconnaissance and an Asbestos Operations and Maintenance (O&M) plan was prepared for the Site in 1996. Other materials sampled in 1996 (thermal system insulation) did not contain detectable asbestos. Observed building materials were generally in good condition at the time of Nova's Site reconnaissance.

5.4 Radon Gas

Two charcoal test vials were utilized to determine the potential presence of radon gas. The vials were placed in the rental office and Apartment 106. Analysis of the test vials indicated concentrations of less than 0.5 and 2.0 picoCuries per liter of air, which is below the EPA action level of 4.0 picoCuries per liter of air. Laboratory analytical results are attached in Appendix F.

5.5 Non-Asbestos Hazardous Materials

Nova observed typical building maintenance and housekeeping supplies (retail-sized containers) and pool maintenance chemicals. No indications of spills, leaks, overflows, or potential routes of entry to the subsurface were observed in association with the storage of these materials.

5.6 Solid (Non-Hazardous) Waste

Waste generation, storage, and disposal practices identified by visual observation of the Site are listed below:

Type of Material	Source	Storage Location	Disposal
Solid Household Refuse	Tenants	Exterior dumpsters and trash receptacles	Solid waste hauler
Sanitary sewage	Site operations	N/A	Municipal sanitary sewer system

No indications of spills, leaks, overflows, or potential routes of entry to the subsurface were observed in association with these materials.

5.7 Hazardous Waste

No indications of hazardous waste generation were identified at the Site. According to the EDR regulatory database report, the Site is not listed as a generator of hazardous wastes under the U.S. EPA Resource Conservation and Recovery Information System (RCRIS).

5.8 Polychlorinated Biphenyls (PCBs)

Potential PCB-containing equipment identified by visual observation of the Site are listed below:

Equipment Type	Owner	Location	Observed Leaks?	PCB Containing?
Five exterior pad-mounted transformers	Xcel Energy	Adjacent to building	No	Unknown
Two hydraulic elevators	Site owner	Building interior	Yes	Unlikely

Five pad-mounted transformers were observed at the Site. No leaks or stains were observed near the transformers. The transformers are owned by the local electric utility, Xcel Energy, who has indicated that transformers such as those at the Site would require testing to determine PCB content and are assumed to contain PCBs in the absence of testing. Xcel Energy has indicated they would be responsible for any necessary maintenance, repair, or cleanup associated with their transformers.

Two hydraulic elevators are located within the Site building. Minor leakage was observed near the elevator equipment for the elevator in the eastern side of the building. Site personnel indicated the elevator service company, Thyssen-Krupp, was aware of this condition, and was scheduled to replace a valve to remedy the leakage. No potential routes of entry to the subsurface such as floor drains or cracks in the floor, were observed in the elevator equipment areas.

5.9 Water and Wastewater/Stormwater

The Site is supplied with municipal water and sanitary sewer service from the City of St. Paul. No septic systems or water wells were noted on-Site. Locally, surface runoff is directed to storm sewer inlets, which discharge into the City of New Brighton stormwater management system.

5.10 Dry Cleaning Operations

Historical and regulatory information reviewed identified no evidence of dry cleaning operations at the Site or adjacent properties.

6.0 REVIEW OF NEARBY/ADJACENT PROPERTIES

General observations of properties adjacent to the Site were performed in conjunction with on-Site observations made January 11, 2006. Developed properties in the vicinity of the Site are residential properties. Properties immediately adjacent to the Site are described below, based on outdoor observations from the Site or nearby public streets.

Direction	***Properties Surrounding Site***
North	Hillsdale Avenue followed by residences
East	Kipling Street followed by apartments
South	Undeveloped wooded land followed by Lower Afton Road and residences
West	Winthrop Street followed by Battle Creek Regional Park

Observation of remaining adjacent properties did not reveal any obvious visual indications of environmental concern. Nova did not observe any evidence of landfills, lagoons, pits, or other waste treatment or disposal operations.

7.0 CONCLUSIONS AND RECOMMENDATIONS

The Site addresses are 1000-1006 West County Road D in New Brighton, Ramsey County, Minnesota. The Site is located at approximately 45.0369 degrees north latitude and 93.2010 degrees west longitude. The Site is improved with one three-story apartment building containing 120 units, three freestanding garage buildings containing 78 garage units, an outdoor recreation/picnic area, and asphalt parking/driveway and landscaped areas.

Historical sources indicate the Sites current improvement took place in 1977, prior to which the Site was comprised of undeveloped/agricultural land.

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system.

Nova was provided with previous LBP sampling documentation. The sampling report indicated that paint sampling was conducted in 48 locations throughout the Site. Lead was identified in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead. Painted surfaces observed at the time of Nova's Site reconnaissance were generally in good condition.

Historically suspect asbestos-containing building materials observed at the Site included flooring and mastic, textured ceiling plaster, sheetrock and taping compound, and roofing materials. Prior asbestos sampling and analysis performed at the Site identified asbestos in the textured ceiling plaster in select locations within the building. These materials were generally in good condition at the time of Nova's Site reconnaissance and an Asbestos Operations and Maintenance (O&M) plan was prepared for the Site in 1996. Other materials sampled in 1996 (thermal system insulation) did not contain detectable asbestos. Observed building materials were generally in good condition at the time of Nova's Site reconnaissance.

Two charcoal test vials were utilized to determine the potential presence of radon gas. The vials were placed in the rental office and Apartment 106. Analysis of the test vials indicated concentrations of less than 0.5 and 2.0 picoCuries per liter of air, which is below the EPA action level of 4.0 picoCuries per liter of air.

This assessment has not revealed evidence of recognized environmental conditions at the Site, except the following:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail.

This report has identified the following items of environmental interest at the Site.

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.

In conjunction with the findings of this assessment, Nova recommends the following:

- Conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

8.0 STANDARD OF CARE

The services performed by Nova Consulting Group, Inc. on this project have been conducted with that level of care and skill ordinarily exercised by reputable members of the profession, practicing in the same locality, under similar budget and time constraints

It is agreed that this report is written for the exclusive use of the client, its affiliates, rating agencies, its prospective institutional bondholders and present institutional bondholders, each of whom will be provided with a copy of the reports in their entirety and thereby entitled to rely thereon. No other party shall have any right to rely on any service provided by Nova Consulting Group, Inc. without prior written consent.

APPENDIX A

FANNIE MAE CHECKLIST

Exhibit 1 **Multifamily**

Exhibit 1 Phase I Environmental Assessment

-PROPERTY LOG-

Fannie Mae Commitment # _____

Property Address *Grand Pre by the Park Apartments*

200 South Winthrop Street and 215 South Kipling Street

St. Paul, MN 55119

Borrower Address _____

_____

Borrower Phone _____

Lender Company Name _____

Lender Underwriter _____

Environmental Assessor *Tom Panning*

Firm Name and Address *Nova Consulting Group, Inc.*

(If different than Lender) *1107 Hazeltine Boulevard, Suite 400*

Chaska, MN 55318

Assessor Phone *(952) 448-9393*

Date Assessment Completed *January 18, 2006*

Assessment Results _____

Exhibit 1 **Multifamily**

Exhibit 1 Phase I Environmental Assessment (Continued)

-RESULTS SUMMARY AND RECOMMENDATION-

1. Phase I Assessment Results (check applicable result for each hazard):

Hazard	*Acceptable*	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy Required*	*Phase II*
Asbestos		X			
PCB	X				
Radon	X				
UST		X			
Waste Sites	X				
Lead-Based Paint		X			
Other	X				

2. Attach a brief explanation for each hazard requiring a Phase II Assessment. List data deficiencies, test results, etc., requiring further assessment.

3. Attach a brief explanation for each hazard that is acceptable but requires Operations and Maintenance ("O & M") actions. What actions are required and how should they be performed?

4. Attach a brief explanation for each failed hazard that could be corrected with remedial actions. What actions are required and how should they be performed?

5. Comments:

.

Thomas A Panning

Signature: _____ Date: 1/17/2006

Exhibit 1 **Multifamily**

Exhibit 1 Phase I Environmental Assessment (Continued)

-ENVIRONMENTAL HAZARDS INFORMATION SOURCES-

Check any information sources used to perform the Phase I Assessment.

1. *Overall Property Description*

____	Building Specifications	____	Zoning or Land Use Maps (e.g. Sanborn)
__X__	Aerial Photos	____	List of Commercial Tenants On-Site
____	Title History	__X__	Verification of Public Water and Sewer
__X__	Site Survey	__X__	Interview with Builder And/or Property Manger
__X__	Interviews with Local Fire, Health, Land Use or Environmental Enforcement Officials.	____	Other _____

2. *Asbestos*

__X__ Dated Building Construction or Rehabilitation Specifications
____ Engineer's/Consultant's Asbestos Report
__X__ Other sampling of building materials

3. *Polychlorinated Biphenyls*

__X__ Utility Transformer Records
__X__ Site Survey of Transformers
____ Site Soil, Groundwater PCB Test Results
____ Other _____

Exhibit 1 Phase I Environmental Assessment (Continued)

4. *Radon*

____ Water Utility Records
____ Gas Utility Records
_X_ On-Site Radon Test Results
____ _____

5. *Underground Storage Tanks*

____ Oil, Motor Fuel and Waste Oil Systems Reports
_X_ CERCLIS/RCRIS Results on Neighborhood (within radius of one mile)
____ Site Soil and Groundwater Tests
_X_ Site Tank Survey
____ Other _____

6. *Waste Sites*

_X_ CERCLIS/RCRIS Results on neighborhoods (within radius of one mile)
_X_ State EPA site lists for neighborhoods (within radius of one mile)
_X_ Federal Facilities Docket
____ Site Soil and Groundwater Test Results
____ Other _____

7. *Lead-Based Paint*

____ Lead Paint Survey
____ Certification/Compliance Records
_X_ Other sampling and analysis of painted surfaces

8. *Additional Hazards*

____ Urea Formaldehyde Foam Insulation Survey
____ Interior Air Test Results
____ Lead in Drinking Water Test Results
_X_ Other Site visit

Exhibit 1 Phase I Environmental Assessment (Continued)

-ASSESSMENT CHECKLIST-

Answer all applicable questions by checking the appropriate box.
(Y-Yes, N-No, DK-Don't Know)

		Y	N	DK
A.	Asbestos:			
	NOTE: All asbestos related assessment, testing, and remedial action programs must be in compliance with EPA document "Guidance for Controlling Asbestos-Containing Materials in Buildings" (EPA 560/5-85-024, 1985). All O & M plans must be in conformance with EPA document "Managing Asbestos in Place: A Building Owner's Guide to Operations and Maintenance Programs for Asbestos-Containing Materials" (EPA, Pesticides & Toxic Substances (TS-799) 20T-2003, July 1990).			
	1. Was (were) the building(s) constructed prior to 1979?	X		
	2. Does a site walk through reveal any visible evidence of asbestos		X	
	3. Is there any documented evidence of asbestos (e.g., building plans)?	X		

		Y	N	DK
	NOTE: If the answer to all three of the above questions is "no" Then stop, the Property is acceptable for asbestos. If the answer to any of the questions is "yes" or "don't know", answer the questions below.			
	4. Is there an asbestos survey that included physical sampling by a qualified firm performed since 1979 that indicates that the Property is free of asbestos?		X	

Exhibit 1 Phase I Environmental Assessment (Continued)

NOTE: If the answer to question 4 is "yes", then stop, the Property is acceptable for asbestos. Otherwise, the property may be deemed "acceptable, requires O & M", if the assessor believes that enough documentation has already been collected and conditions warrant such a response. If no, either the property fails or a Phase II assessment is required.

5. Comments:
Previous sampling and analysis of building materials identified asbestos in textured ceiling plaster at the Site. An Asbestos Operations and Maintenance (O&M) plan was prepared for the Site in 1996. If future renovation activities will disturb materials not previously tested, they should be tested prior to the planned activities.

6. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
	X			

	Y	**N**	**DK**
B. Polychlorinated Biphenyls (PCBs):			
1. Are there any PCB transformers or PCB contaminated transformers anywhere on the property?	X		
2. Is there any visible or documented evidence of soil or groundwater contamination from PCBs on the Property?		X	

NOTE: If the answer to both questions is "no", then stop, the property Is acceptable for PCBs. If the answer is "don't know", then Stop, a Phase II assessment is required and all regulatory requirements must be met. Otherwise, answer the questions below.

Exhibit 1 **Multifamily**

	Y	N	DK
3. (If the answer to question 1 is "yes") Are any of the transformers owned by any party with an interest in the Property located inside any of the residential buildings?		X	
4. (If question 1 above is "yes") Are any of the transformers badly labeled, damaged, or show indications of poor maintenance?		X	
5. (If question 1 above is "yes') Is there any evidence of leakage on or around the transformers?		X	
6. (If question 2 above is "yes") Have PCB concentrations of 50 ppm or greater been found in contaminated soils or groundwater?		X	

NOTE: If the answers to questions 3,4,5 and 6 are all "no", then the Property is acceptable for PCBs. Otherwise, the Property either fails or requires a Phase II assessment.

7. Comments:
The transformers are the responsibility of the local electric utility; no indications of releases were observed near the transformers.

8. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
X				

Exhibit 1 Phase I Environmental Assessment (Continued)

	Y	N	DK
C. Radon:			

Exhibit 1

Multifamily

1. Were the results of an EPA approved short-term radon test performed in the lowest public areas of the building(s) within the last six months, at/or below 4 pCi/l or 0.02 WL? X

NOTE: If the answer is "no" or don't know", then stop, a Phase II assessment including on-site testing is required. If the answer is "yes", answer the questions below.

2. Is there any evidence that nearby structures have elevated indoor levels of radon or radon progeny? X

3. Have local water supplies been found to have elevated levels of radon or radium? X

4. Is the Property located on or near sites that currently are or formerly were used for uranium, thorium, or radium extraction or for phosphate processing? X

NOTE: If the answer to questions 2, 3, or 4 is "yes", then a Phase II Assessment is required. If the answer to questions 2, 3, and 4 is "no", then the Property is acceptable for radon. A Property may be acceptable for radon with a "don't know" answer for questions 2, 3 or 4, but the assessor must justify the decision.

5. Comments:

Radon was not detected above 4.0 pCi/L in sampling conducted at the Site part of this assessment.

Exhibit 1 Phase I Environmental Assessment (Continued)

6. Phase I Assessment (check one)

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
X				

		Y	**N**	**DK**
D.	Underground Storage Tanks (USTs):			
	NOTE: In the questions below, "API" stands for American Petroleum Institute" and NFPA stands for "National Fire Protection Association":			
1.	Is there a current site survey performed by a qualified engineer which indicates that the Property is free of any USTs?		X	
2.	Is there any visible or documented evidence of soil or groundwater contamination on the Property?		X	
3.	Are there any petroleum storage and/or delivery facilities (including gas stations) or chemical manufacturing plants located on adjacent properties?		X	
	NOTE: If the answer to question 1 is "yes", and the answers to questions 2 and 3 are "no", then stop, the Property is acceptable for USTs. If the answer to question 2 or 3 is "yes" or "don't know", then stop, either the property fails or a Phase II assessment is required. If the answer to questions 1, 2 and 3 are all "no" then answer questions below.			

Exhibit 1 Phase I Environmental Assessment (Continued)

		Y	N	DK
4.	Are there any active underground tank facilities on-site for such activities as motor fuel, waste oil or fuel oil storage?	X		
5.	(If "yes" to question 4) Have these facilities been maintained in accordance with applicable laws and regulations and with sound industry standards? (e.g., API Bulletin 1621 and 1623; NFPA Bulletin 329, 70, 77 etc. or successor documents)	X		

NOTE: If the answer to 4 is "no", skip to question 8 below. If the answer to 4 is "don't know" then stop, either the property fails or a Phase II Assessment is required. If the answer to 5 is "no" or "don't know" then stop, either the property fails or a Phase II Assessment is required. If the answer to both questions 4 and 5 is "yes", answer the questions below.

6.	(If "yes" to question 4) Are any of the tanks more than 10 years old?	X		
7.	(If "yes" to question 6) Have all of the tanks that are more than 10 years old been successfully tested for leaks within the last year using an API approved test?		X	

NOTE: If the answer to question 6 is "no", answer the questions below. If the answer to question 6 is "don't know", then stop, either the Property fails or a Phase II assessment is required. If the answer to question 7 is "yes", then answer the questions below. Otherwise, stop, either the Property fails or a Phase II assessment is required.

Exhibit 1 Phase I Environmental Assessment (Continued)

		Y	N	DK
8.	Are there any deactivated USTs on the Property?		X	

9. (If "yes" to question 8)
Were all of the tanks deactivated in accordance with applicable laws and regulations and with sound industry practices (e.g., API Bulletins #1604 and #2202 or NFPA Bulletin #30; or successor documents)?

NOTE: If the answer to question 8 is "no", or if the answer to question 9 is "yes" then the Property is acceptable for USTs. If the answer to question 8 is "don't know" or if the answer to question 9 is "no" or "don't know" then either the property fails or a Phase II Assessment is required.

10. Comments: The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST. The UST system is 29 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

11. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
				X

	Y	N	DK
E. Waste Disposal Facilities			
1. Is there any documented or visible evidence of dangerous waste handling on the subject Property or adjoining sites (e.g., stressed vegetation, stained soil, open or leaking containers, foul fumes or smells, oily ponds, etc)?		X	
2. Was the property ever used for research, industrial or military purposes during the last 30 years?		X	
3. Has space on the property even been leased to commercial tenants who are likely to have used, transported or disposed toxic chemicals (e.g. dry cleaner, print shop, service station, etc.)?		X	
4. Is water for the Property provided either by a private company or directly from a well on the property?		X	
5. Are there any obvious high risk neighbors on adjacent properties engaged in producing, disposing, storing or transporting hazardous waste, chemicals, or substances.	X		
6. Does the property or any site within 1 mile, appear on any state or federal list of hazardous waste sites (e.g. CERCLIS, RCRIS, etc.)?	X		

NOTE: If the answer to all of questions 1 through 6 is "no", then stop, the Property is acceptable for waste disposal facilities. Otherwise, the property either fails or a Phase II Assessment is required.

7. Comments:

Facilities identified in the surrounding area in Site observations and the regulatory database review are not expected to impact the Site based on distance and/or ground water flow considerations.

8. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
X				

	Y	**N**	**DK**
F. Lead Based Paint (More than 0.5% by Dry-Weight):			
1. Was the Property constructed after 1978 and are all buildings free of chipping or deteriorating paint?		X	
2. Does the property have a current, valid certification from applicable state or local authorities demonstrating it is in full compliance with Lead Based Paint laws, ordinances or regulations regardless of what eligible tenant population may live there (Answer "no" if no certification process exists)?			X

NOTE: If the answer to either question 1 or 2 is "yes", then stop, the property is acceptable for Lead Based Paint. Otherwise, answer he question below.

Exhibit 1 Phase I Environmental Assessment (Continued)

		Y	N	DK
3	Do the results of mandatory on-site sampling and analysis of representative surfaces from interior common areas and multiple unit bedrooms (include "chewable" areas as well as damaged or deteriorating paints) and exterior surfaces indicate that the Property is free of Lead Based Paints? Between 10 (minimum) and 30 (maximum) samples must be taken (target a ratio of 10 samples per 100 units).		X	

NOTE: If the answer to question 3 is "yes", then stop, the Property is acceptable for Lead Based Paint. If the answer to Question 3 is "don't know", then the property is unacceptable for Lead Based Paint. If the answer to question 3 is "no", answer the question below.

4.	Is the property currently in violation of any applicable law, ordinance or regulation in anyway relating to Lead Based Paint?			X

NOTE: If the answer to question 4 is "yes" or "don't know" then the Property is unacceptable for Lead Based Paint. If the answer to question 4 is "no" (or, if an unacceptable Property is remediated for Lead Based Paint so that it is no longer in violation of applicable laws, ordinances or regulations) then the Property is considered "acceptable, requires O&M," provided that an O&M Plan is developed and that the Borrower and Lender execute the Fannie Mae Lead Based Paint Acknowledgement and Indemnification Agreement (see Exhibit 3). (This agreement must be assigned to Fannie Mae at loan delivery). Finally, the provisions provided in Exhibit 4 must be added to the Note Addendum and the Rider to the Security Instrument, as specified in that Exhibit.

Exhibit 1 Phase I Environmental Assessment (Continued)

5. Comments:
Previous lead-based paint sampling at the Site identified lead in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

6. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
				X

Y N DK

G. Additional Hazardous:

1. Do the tenant areas contain Urea Formaldehyde Foam Insulation (UFFI) that was installed less than a year ago? X

2. (IF the answer to question 1 is “yes” or “don’t know”)
Did the current HVAC system meet ASHRAE standards (standard 62-73 and successors) when it was installed?

NOTE: If the answer to question 1 is "no", or if the answer to question 2 is "yes", then the Property is acceptable for UFFI. Proceed to question 3. If the answer to question 2 is "no" or "don't know", then the Property fails for UFFI. The application may continue, but the Lender must demonstrate prior to Commitment by Fannie Mae that the ventilation system currently meets ASHRAE standards. Proceed to question 3.

3.	Is the property served by publicly regulated municipal water and sewage services?	X		

NOTE: If the answer to question 3 is "yes", then proceed to question 4. If the answer is "no" or "don't know" then the Property is not acceptable for Phase I water and sewage services. A Phase II Assessment plan must be developed by the Lender and approved by the Fannie Mae Property Regional Office before a wavier will be considered. Proceed to question 4.

		Y	**N**	**DK**
4.	Does the local utility providing the drinking water meet current EPA requirements for lead concentrations?	X		

NOTE: If the answer to question 4 is "yes", then the Lender should confirm that the Property is in compliance with all state and local disclosure laws. With that confirmation, the Property is acceptable for lead in drinking water. Proceed to question 5. If the answer is "no" or "don't know", the Lender must contact the utility and obtain a description of the affirmative plan the utility is following to come into compliance. In addition, the Lender must also contact the local health authorities and implement any required response and notification measures. Proceed to question 5.

5.	Is there any evidence of illegal or dangerous on-site application, handling or storage of maintenance chemicals such as pesticides, rodenticides, fertilizers, cleaners, paints, solvents, swimming pool cleaners, etc.		X	

NOTE: If the answer to question 5 is "no" then the Property is acceptable for maintenance chemicals. If the answer is "yes" or "don't know" then the Property fails the Phase I Assessment. However, if 1) there are no violations of applicable law or regulations and 2) a Phase II Assessment is not warranted, the Property can be made "acceptable" or "acceptable, requires O&M" through on-site clean-up and , if appropriate, the creation of an O&M plan for maintenance chemicals.

6. Comments:

7. Phase I Assessment Results (check one):

Acceptable	*Acceptable Requires O & M*	*Fail*	*Fail, Possible Remedy*	*Phase II Required*
X

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRAInfo:RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 10/14/2005 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page
GEORGETOWN PARK TOWNHOMES	***2257 HILLSDALE AVE***	***1/8 - 1/4 E***	***2***	***6***
SUPERAMERICA 4425	***275 S MCKNIGHT RD***	***1/8 - 1/4 SE***	***B7***	***13***

FINDS: The Facility Index System contains both facility information and "pointers" to other sources of information that contain more detail. These include: RCRIS; Permit Compliance System (PCS); Aerometric Information Retrieval System (AIRS); FATES (FIFRA [Federal Insecticide Fungicide Rodenticide Act] and TSCA Enforcement System, FTTS [FIFRA/TSCA Tracking System]; CERCLIS; DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes); Federal Underground Injection Control (FURS); Federal Reporting Data System (FRDS); Surface Impoundments (SIA); TSCA Chemicals in Commerce Information System (CICS); PADS; RCRA-J (medical waste transporters/disposers); TRIS; and TSCA. The source of this database is the U.S. EPA/NTIS.

A review of the FINDS list, as provided by EDR, and dated 09/29/2005 has revealed that there are 2 FINDS sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Minnesota Pollution Control Agency's Leak Sites list.

A review of the LUST list, as provided by EDR, and dated 09/01/2005 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 10/14/05
Date Data Arrived at EDR: 11/02/05
Date Made Active in Reports: 12/07/05
Number of Days to Update: 35

Source: EPA
Telephone: N/A
Last EDR Contact: 11/02/05
Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

NPL Site Boundaries

Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Next Scheduled EDR Contact: 01/30/06
Data Release Frequency: Quarterly

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner receives notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/91
Date Data Arrived at EDR: 02/02/94
Date Made Active in Reports: 03/30/94
Number of Days to Update: 56

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 09/19/05
Date Data Arrived at EDR: 10/21/05
Date Made Active in Reports: 10/27/05
Number of Days to Update: 6

Last EDR Contact: 12/21/05
Next Scheduled EDR Contact: 03/20/06
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

As of February 1995, CERCLIS sites designated "No Further Remedial Action Planned" (NFRAP) have been removed from CERCLIS. NFRAP sites may be sites where, following an initial investigation, no contamination was found, contamination was removed quickly without the need for the site to be placed on the NPL, or the contamination was not serious enough to require Federal Superfund action or NPL consideration. EPA has removed approximately 25,000 NFRAP sites to lift the unintended barriers to the redevelopment of these properties and has archived them as historical records so EPA does not needlessly repeat the investigations in the future. This policy change is part of the EPA's Brownfields Redevelopment Program to help cities, states, private investors and affected citizens to promote economic redevelopment of unproductive urban sites.

Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Next Scheduled EDR Contact: 12/26/05
Data Release Frequency: Varies

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

Data Release Frequency: Annually

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized. In 1978, 24 inactive uranium mill tailings sites in Oregon, Idaho, Wyoming, Utah, Colorado, New Mexico, Texas, North Dakota, South Dakota, Pennsylvania, and on Navajo and Hopi tribal lands, were targeted for cleanup by the Department of Energy.

FINDS: Facility Index System/Facility Registry System

Facility Index System. FINDS contains both facility information and 'pointers' to other sources that contain more detail. EDR includes the following FINDS databases in this report: PCS (Permit Compliance System), AIRS (Aerometric Information Retrieval System), DOCKET (Enforcement Docket used to manage and track information on civil judicial enforcement cases for all environmental statutes), FURS (Federal Underground Injection Control), C-DOCKET (Criminal Docket System used to track criminal enforcement actions for all environmental statutes), FFIS (Federal Facilities Information System), STATE (State Environmental Laws and Statutes), and PADS (PCB Activity Data System).

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Site Remediation System Database

The SRS database includes all sites that the State Superfund Program is dealing with or has dealt with. The Superfund Program identifies, investigates and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites where a release or potential release of a hazardous substance poses a risk to human health or the environment.

SWF/LF: Permitted Solid Waste Disposal Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

LCP: Closed Landfills Priority List

The Minnesota Legislature enacted a law to manage and clean up the state's closed Mixed Municipal Solid Waste Landfills. Under that law, the MPCA is required to create and periodically revise a priority list of qualified landfills, based on the relative health and environmental risks they present. The MPCA established the first such priority list in December, 1994.

BROWNFIELDS: Petroleum Brownfields Program Sites

Purchasing, selling, or developing property can present a special set of obstacles if the property is contaminated with chemicals. The Petroleum Brownfields Program is one of several programs within the Minnesota Pollution Control Agency (MPCA) designed to help people address these obstacles. The purpose of the Petroleum Brownfields Program is to provide the technical assistance and liability assurance needed to expedite and facilitate the development, transfer, investigation and/or cleanup of property that is contaminated with petroleum.

CDL: Clandestine Drug Labs

This data was passively gathered. That is, the DOH asks law enforcement and other agencies to notify them of Clandestine Drug Labs (CDLs). They do not require reporting of events. Therefore the data represents only a subset of all CDLs. This data has not been verified. The DOH has made no attempt to verify that reported CDLs actually occurred. They have no knowledge if the CDL was involved in cooking or just consisted of chemicals associated with Meth production. The reports they receive are that a suspected CDL was seized.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Electric Power Transmission Line Data
Source: PennWell Corporation
Telephone: (800) 823-6277
This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Centers
Source: Department of Human Services
Telephone: 651-296-3971

Flood Zone Data: This data, available in select counties across the country, was obtained by EDR in 1999 from the Federal Emergency Management Agency (FEMA). Data depicts 100-year and 500-year flood zones as defined by FEMA.

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002 from the U.S. Fish and Wildlife Service.

Project Manager

EXECUTIVE SUMMARY

Nova was authorized by Hurley Partners Limited Partnership, LLP and Greenhead Investments, LLC to conduct a Phase I Environmental Site Assessment (ESA) of the Grand Pre by the Park Apartments property located at 200 South Winthrop Street and 215 South Kipling Street in St. Paul, Minnesota 55119 ("the Site"). Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2005, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM 1527-2005 standard practice and authorized Scope of Services.

This Executive Summary summarizes the key findings of this assessment based on information and data available to Nova during the performance of this project. The Executive Summary also presents Conclusions and Recommendations, which are based on the conditions existing at the time of the assessment. This summary does not contain all the information that is found in the full report. Detailed information regarding these findings is provided in the corresponding section of the text of the report. The report should be read in its entirety to obtain a more complete understanding of the information provided.

Findings and Conclusions

The following table summarizes the findings of the significant elements of this investigation.

ASSESSMENT COMPONENT	ACCEPTABLE	ROUTINE SOLUTION	PHASE II	ESTIMATED COST	REFERENCE SECTION
Historical Review	X				3.0
On-site Operations	X				4.2
Hazardous Materials	X				4.5
Waste Generation	X				4.6
PCBs	X				4.7
Asbestos		X			4.9
Lead in Drinking Water	X				4.4
Storage Tanks		X			4.8
Surface Areas	X				4.3
Regulatory Database Review	X				5.0
Lead-Based Paint		X			4.11
Radon	X				4.10
Mold	X				4.12
Dry Cleaners	X				4.13
Other	X				4.14
Surrounding Properties	X				4.15

The Site includes approximately 8.9 acres and is occupied by one four-story apartment building containing 216 apartment units. A parking garage occupies the majority of the first level of the building. Exterior areas are occupied by surface parking areas, an outdoor pool area, two picnic areas, and landscaped areas.

The general vicinity of the Site is occupied by undeveloped land, parkland, and single-family and multi-family residential properties. Current uses of adjoining properties include Hillsdale Avenue followed by residences to the north; Kipling Street followed by apartments to the east; undeveloped land followed by Lower Afton Road and residences to the south; and Winthrop Street followed by Battle Creek Regional Park to the west.

The available historical information indicates the Site was undeveloped land from at least 1937 until 1977, when the existing improvements were constructed.

Nova has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 200 South Winthrop Street and 215 South Kipling Street in St. Paul, Minnesota 55119, the Site. Any exceptions to or deletions from this practice are described in Section 4.1 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Site, except for the following:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Soil sampling and analysis completed by Nova concurrently with this assessment did not identify petroleum impacts to soils in the area of this UST. The UST system is 30 years old and has reached an age where tanks statistically begin to fail.

Additionally, the following items of environmental concern were noted that warrant mention.

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.
- Previous sampling identified lead in the enamel coating on bathtubs in apartment units. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

Recommendations

Based on the findings of this Phase I Environmental Site Assessment, Nova recommends the following:

- Conducting annual tightness and line testing or soil sampling and analysis as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

- Continued maintenance of identified asbestos-containing materials and lead-containing materials in accordance with the Operations and Maintenance (O&M) Plans for the Site.

E. Regulatory Database Evaluation Report

1.0 PROJECT DESCRIPTION

1.1 Site Description

Site Address	200 South Winthrop Street and 215 South Kipling Street, St. Paul, Ramsey County, Minnesota
Topographic Location	44.93 degrees north latitude / 93.01 degrees west longitude
Tenant description	Grand Pre by the Park Apartments
Site acreage, building(s) description	Acreage: 8.9 acres; Bldg.(s) description: 335,466 square feet; 3-stories plus a parking garage
Site exterior	Landscaping, paved parking & drive areas

A copy of a portion of the topographic map of the area, with the Site location marked, is included as Figure 1.

1.2 Purpose

The purpose of this ESA was to identify the potential for *recognized environmental conditions* to exist at the Site. The term recognized environmental conditions means the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

Nova understands this ESA is also being completed to assist in qualifying for Landowner Liability Protections (LLPs) under CERCLA unless otherwise so stated in this report.

Environmental issues or concerns at a property that are outside the scope of ASTM E1527-2005 that parties may wish to assess in connection with commercial real estate transactions include, but are not limited to the following: asbestos-containing materials, radon, lead-based paint, lead in drinking water, wetlands, regulatory compliance, cultural and historic resources, health and safety, ecological resources, endangered species, indoor air quality, and high voltage (EMF) powerlines. These items, unless requested by the client or as deemed relevant to a Site on a case-specific basis, are not included in this ESA.

1.3 Reliance

The Services performed hereunder (including the reports prepared by Nova) are for the use and benefit of Hurley Partners Limited Partnership, LLP andGreenhead Investments, LLC and may also be relied upon by Hurley Partners Limited Partnership, LLP andGreenhead Investments, LLC or any of their affiliates.

1.4 Scope of Services

Nova's Scope of Services for this Phase I ESA conforms with the American Society for Testing and Materials (ASTM) due diligence standards detailed in the ASTM document "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process" (ASTM designation E1527-2005). Services provided for this project included:

- A review of readily available topographic, geologic, and hydrogeologic information pertaining to the Site and surrounding area;
- A review of readily available information regarding historical land use activities at the Site, and interviews with people that have knowledge regarding the past or present uses of the Site, and with present and past owners, operators, and occupants of the Site, where feasible;
- A reconnaissance of the Site to visually and physically observe the Site for evidence of potential recognized environmental conditions;
- A limited review of federal, state, and local regulatory information records for reported potential environmental hazards on or in the vicinity of the Site; and
- Review of previous environmental reports, if available.

No sampling or analytical testing was conducted as part of this Phase I ESA. This Phase I ESA does not constitute a regulatory compliance audit of the Site; however, any obvious issues of noncompliance are noted in the report. Copies of resumes of Nova staff involved in the preparation of this report are included as Appendix A.

1.5 User's Responsibilities & Obligations

The Client has not reported the existence of any environmental liens encumbering the Site property. Except as noted in this report, the Client did not report specialized knowledge and experience which provides important information regarding previous ownership or use of the Site which is material in identifying recognized environmental conditions.

2.0 HYDROGEOLOGIC SETTING

Readily available hydrogeologic information was reviewed to evaluate surface and subsurface characteristics in the vicinity of the Site. This section summarizes the results of the hydrogeologic evaluation. Information reviewed for this project is listed in the Reference Section.

2.1 Geologic Setting

Published geologic information indicates the following:

Topographic Site Elevation	885 to 925 feet above mean sea level
Surficial Materials	Superior Lobe glacial till deposits composed primarily of clay and sandy clay
First Bedrock Beneath the Site, Physiographic Province / Geologic Age	Ordovician geologic age sandstone of the St. Peter Formation. Physiographic Province: Central Lowland province of the Interior Plains: includes a variety of areas of till plain and many hilly areas formed by glacial moraines. Some areas were covered with material washed out from the moraine areas and redeposited by the glacial meltwater. Some of these outwash plains are cut by shallow valleys or are pitted where large blocks of buried ice later melted.
Estimated depth to Bedrock beneath Site	100-150 feet below the ground surface

2.2 Area Hydrogeology

Published hydrogeologic maps indicate the following:

Depth to groundwater beneath Site	30 to 50 feet below the ground surface
Regional groundwater flow direction	Southwesterly toward the Mississippi River
Sole source aquifer (if present)	The Site does not overlie a sole source aquifer.

(Groundwater flow direction is estimated based on a review of published maps. Site specific groundwater flow conditions may be impacted by a variety of factors including, but not limited to, local topography, geologic anomalies, utilities, nearby wells or sumps, and local drainage patterns. Site specific groundwater information would require a groundwater investigation, which is beyond the scope of this ESA.)

2.3 Records of Water Wells

Nova reviewed well log records provided by the Minnesota Geological Survey (MGS) for the area of the Site. These well records were compiled by the MGS and the Minnesota Department

of Health (MDH) from drilling records and well log records submitted to the agency. No well records were on file for the Site.

2.4 Hydrologic & Topographic Conditions

The Site topography generally slopes to the southwest.. Surface water drainage is expected to flow into storm water drains located throughout the Site and in adjacent streets..

2.5 Flood Zone Information

According to the Flood Insurance Rate Map, published by the Federal Emergency Management Agency (FEMA) and dated 1978, the Property is located in Zone X, defined as an area outside the 500-year flood plain with less than 0.2% annual probability of flooding. Annual Probability of Flooding of Less than one percent.

3.0 HISTORICAL LAND USE REVIEW

Readily available historical information was reviewed to evaluate the previous uses of the Site, and previous uses of properties in the vicinity of the Site. This section summarizes the results of the historical evaluation. Information reviewed for this project is listed in the Reference Section.

3.1 Site Use Summary

The available historical information indicates the Site was undeveloped land from at least 1937 until 1977, when the existing improvements were constructed.

Surrounding properties were generally undeveloped or agricultural until the 1960s and 1970s when residential development commenced in the areas surrounding the Site. Based on information discussed below, historic uses of the surrounding properties are not expected to have resulted in the potential for current impact to the Site subsurface.

3.2 Sanborn Fire Insurance Maps

Fire insurance maps were created for insurance underwriters and often contain information regarding the uses of individual structures, and the locations of fuel and/or chemical storage tanks which may have been on a particular property. Review of the EDR fire insurance map collection indicated that no maps have been prepared for the Site area. A copy of the No Coverage Letter is included in Appendix B.

3.3 Aerial Photographs

Aerial photographs for the Site area were available for review at the Wilson Library at the University of Minnesota and http://www.globexplorer.com for the years 1937, 1940, 1953, 1957, 1974, 1980, 1991 and 2004 and were reviewed for this ESA. Copies of selected aerial photographs are included as Appendix C.

3.3.1 Past Site Uses

YEAR(S)	USE
1937-1957	The Site appears to be cultivated farmland and undeveloped land
1974	The Site is visible as undeveloped land
1991 and 2004	The current improvements are visible at the Site

No previous uses indicative of environmentally suspect practices or activities were identified on the Site on the aerials reviewed for this assessment.

3.3.2 Past Adjacent Property Uses

1937-1957	
Direction	**Use**
North	Farmland
East	Farmland
South	Undeveloped land
West	Undeveloped land

1974-2004	
Direction	**Use**
North	Hillsdale Avenue followed by residences
East	Kipling Street followed by apartments
South	Undeveloped land
West	Winthrop Street followed by undeveloped land

No previous uses indicative of environmentally suspect practices or activities were identified at the surrounding properties on the aerials reviewed for this assessment.

3.4 City Directories

City Directories provide listings, arranged by street address, of businesses and residences for the year in which the directory was published. City directories for the years 1930, 1940, 1950, 1960, 1970, 1976, 1977, 1985-1986, 1995-1996, and 2005 were reviewed at the St. Paul Public Library. A summary of information reviewed is included in the following table.

Year(s)	*Property Use*
1930-1960	No listings were identified corresponding to the Site or adjacent properties
1970 and 1976	No listings identified corresponding to the Site. Apartments are listed to the east of the Site and residences are listed to the north of the Site.
1985 through 2005	Site addresses are listed as apartments. Surrounding property use is unchanged from 1976.

Overall, historic uses of the Site and adjacent properties as identified in the city directories are not expected to have resulted in the potential for current impacts to the Site subsurface.

3.5 Local Agency Review

3.5.1 City of St. Paul

CONTACT NAME SOURCE TYPE PHONE NUMBER	COMMENTS
Permit files	Review of available file information indicated the original building permit for the Site was dated January 13, 1976 with various permits issued at later dates for miscellaneous repair and installation activities. No permits indicating the installation or removal of USTs was noted in the available file information. The Site is zoned RM2-Multifamily Residential.

3.5.2 Ramsey County - Department of Property Records and Revenue/Assessor

CONTACT NAME SOURCE TYPE PHONE NUMBER	COMMENTS
Online Information	The Site has been assigned Parcel 022822440095 and the Site acreage is 8.9 acres.

According to the Ramsey County Recorder's Office, no environmentally-related liens or deed restrictions have been recorded against the Site.

3.6 Interviews

The following individuals were interviewed in conjunction with this ESA.

CONTACT NAME	AFFILIATION	DATE INTERVIEWED	COMMENTS
Leslie Gilpin	Property Manager-Johnson Management Company	April 16, 2007	Provided information regarding Site background and operations

Reasonably ascertainable information from current and/or past Site, and/or tenants of the Site provided no evidence indicative of known or suspect environmental concerns associated with the Site. Information from these interviews appears in various sections of this report depending upon the nature of the information.

3.7 Previous Reports and Proceedings

Ms. Leslie Gilpin reported no knowledge of any pending, threatened, or past litigation, administrative proceedings, notices of violations, environmental liens, or activity and use limitations concerning the Site relating to hazardous substances or petroleum products. The following previous report was reviewed in conjunction with this environmental site assessment.

> *"Phase I Environmental Assessment and Limited Subsurface Investigation, Grand Pre by the Park Apartments, 200 South Winthrop Street and 215 South Kipling Street, St. Paul, Minnesota"*; dated September 5, 1996. The report is summarized below.

Available historical information indicated the Site was historically undeveloped prior to construction of the existing apartment building at the Site.

Sampling and analysis of building materials identified asbestos in samples of textured ceiling plaster from apartment units and hallways. The report recommended development of an Operations and Maintenance Program to maintain these materials.

A 30,000-gallon heating oil UST was identified at the Site. At the time of the 1996 report, the UST at the Site was not registered with the MPCA. Two soil borings were placed to depths of 21 feet adjacent to the UST to evaluate subsurface conditions in the area. No visual or olfactory evidence of petroleum impacts or elevated organic vapor readings were identified in field screening of the samples collected from the borings. Laboratory analysis of soil samples collected from the borings did not identify fuel oil constituents above laboratory detection limits.

No facilities expected to have impacted subsurface conditions at the Site were identified in the regulatory database review.

The report recommended registration of the UST with the MPCA, determination of PCB content of light ballasts prior to disposal, and proper disposal of used fluorescent and HID light tubes.

"Phase I Environmental Assessment Report, Grand Pre by the Park Apartments, 200 South Winthrop Street and 215 South Kipling Street, St. Paul, Minnesota 55119"; dated January 18, 2006.

The findings of the 2006 report were similar to the 1996 report.

Nova was also provided with the following previous reports which are summarized below.

"Environmental Site Assessment of Grand Pre Apartments, 200 South Winthrop Street, St. Paul, Minnesota"; prepared by ATC Associates, Inc., dated December 28, 2001.

The findings of the report were consistent with the 1996 report. The report recommended integrity testing of UST and ongoing operations and maintenance for the previously identified asbestos-containing materials.

HUD Lead-Based Paint Inspection/Risk Assessment Report for Grand Pre by the Park Apartment Complex, Located at 200 South Winthrop, St. Paul, Minnesota", prepared by Midwest Environmental Consulting, L.L.C., dated April 26, 2005.

Paint sampling was conducted in 48 locations throughout the Site. Lead was identified in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

3.8 Chain of Title Search and Judicial Records Review

Nova was not provided a chain of title by the Client for review as part of this Environmental Site Assessment. Nova was not requested to review judicial records as part of this Environmental Site Assessment.

4.0 SITE RECONNAISSANCE

Thomas J. Panning of Nova conducted a reconnaissance of the Site April 16, 2007 to identify potential recognized environmental conditions in connection with the Site. A diagram of the Site is attached as Figure 2. Selected photographs taken during the Site reconnaissance are included as Appendix D.

The Site includes approximately 8.9 acres and is occupied by one four-story apartment building containing 216 apartment units. A parking garage occupies the majority of the first level of the building. Exterior areas are occupied by surface parking areas, an outdoor pool area, two picnic areas, and landscaped areas.

4.1 Site Access and Limitations

Ms. Leslie Gilpin, Site manager, provided access to the Site and accompanied Nova for a portion of the Site visit. Nova visually and physically observed the periphery of the Site. Nova accessed all interior common and mechanical areas at the Site, representative apartment units, and all exterior areas. Weather conditions at the time of the reconnaissance were mostly sunny with temperatures in the 60 degrees Fahrenheit range.

4.2 Current Operations/Tenants

The Site is solely occupied by Grand Pre by the Park Apartments. With the exception of a 30,000-gallon heating oil underground storage tank (discussed in Section 4.8), no operations indicative of known or suspect environmental concern were noted during Nova's reconnaissance. The Site reconnaissance revealed no evidence of significant past leaks or spills or improper use, storage, or generation of hazardous materials expected to have resulted in the potential for current impacts to the Site subsurface.

4.3 On Site Characteristics

Nova observed no evidence of surface water features including wetlands, lagoons, impoundments, pits, ponds, drywells, creeks, pools of liquids, or other bodies of water on the Site. No evidence of sumps or catch basins, other than used for stormwater removal, was observed or reported during the Site reconnaissance. Nova observed no evidence of distressed vegetation, staining or corrosion, dumping of hazardous materials, filled areas, or patched pavement, other than typical parking lot repairs/repaving, on the Site.

4.4 Utilities / Building Systems

The following utilities are provided to the Site:

UTILITY SERVICE	PROVIDER	UTILITY SERVICE	PROVIDER
Potable water and sewer	City of St. Paul	Electricity	Xcel Energy
Natural gas	Xcel Energy	Propane	NA

No evidence of potable drinking water wells, sumps, lift stations, or septic systems was observed on the Site. According to the most recent groundwater quality report for St. Paul, the drinking

water supply at the Site is in compliance with the EPA's drinking water quality standards. Nova noted no strong, pungent, or noxious odors during the Site visit.

4.5 Chemical Use and Storage

Chemical storage and/or hazardous materials identified by visual observation of the Site are listed below:

CHEMICAL STORAGE			
Type of Material	**Approximate Quantities**	**Storage Location**	**Use**
Typical household cleaning and building maintenance supplies	Housekeeping – retail size containers.	Janitorial closets and apartment units	Housekeeping and maintenance
Pool maintenance chemicals	Several 5-gallon and smaller containers	Pool areas	Pool maintenance

No indications of spills, leaks, overflows, or potential routes of entry to the subsurface were observed in association with the storage of these materials. The use and storage of these materials appears to comply with local, state, and federal requirements.

4.6 Waste Generation / Storage / Disposal

Waste generation, storage, and disposal practices identified by visual observation of the Site are listed below:

WASTE GENERATION, STORAGE, AND DISPOSAL			
Type of Material	**Source**	**Storage Location**	**Disposal**
General municipal waste	Site operations	Dumpsters	Contracted waste hauler
Sanitary wastes	Site operations	N/A	Sanitary sewer system

Nova observed no indications of spills, leaks, overflows, or potential routes of entry to the subsurface in association with these materials. The generation, storage, and disposal activities of these materials appear to comply with local, state, and federal requirements.

4.7 Potential PCB-Containing Equipment

Potential PCB-containing equipment identified by visual observation of the Site is listed below:

POLYCHLORINATED BIPHENYLS (PCBs)					
Equipment Type	**Quantity**	**Owner**	**Location**	**Observed Leak?**	**PCB-Containing?**
Pad-mounted transformer	Five	Xcel Energy	Site exterior	No	Unlikely
Elevator equipment	Two	Building owner	Interior	No	Unlikely

Five pad-mounted transformers were observed at the Site. No leaks or stains were observed near the transformers. The transformers are owned by the local electric utility, Xcel Energy, who has indicated that transformers such as those at the Site would require testing to determine PCB content and are assumed to contain PCBs in the absence of testing. Xcel Energy has indicated they would be responsible for any necessary maintenance, repair, or cleanup associated with their transformers.

Two hydraulic elevators are located within the Site building. Minor leakage was observed near the elevator equipment for the elevator in the eastern side of the building. Site personnel indicated the elevator service company, Thyssen-Krupp, was aware of this condition, and was scheduled to replace a valve to remedy the leakage. No potential routes of entry to the subsurface such as floor drains or cracks in the floor, were observed in the elevator equipment areas.

4.8 Storage Tanks / Drums

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Previous soil sampling and analysis (1996) and tank tightness testing (2002) have not identified indications of a release from the UST.

Nova also performed a Phase II investigation in conjunction with this Phase I Assessment that consisted of soil sampling and analysis at locations adjacent to the UST. Petroleum constituents were not detected above laboratory detection limits in the samples collected and analyzed for the Phase II Assessment. Although no indications of a release have been identified, the UST system is 30 years old and has reached an age where tanks statistically begin to fail. Nova recommends conducting annual tightness and line testing or soil sampling and analysis as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

No aboveground storage tanks were observed on the Site. No unlabeled containers or drums were observed during the Site reconnaissance.

4.9 Asbestos-Containing Building Materials (ACBM)

Historically suspect asbestos-containing building materials observed at the Site included flooring and mastic, textured ceiling plaster, sheetrock and taping compound, and roofing materials. Prior asbestos sampling and analysis performed at the Site identified asbestos in the textured ceiling plaster in select locations within the building. These materials were generally in good condition at the time of Nova's Site reconnaissance and an Asbestos Operations and Maintenance (O&M) plan was prepared for the Site in 1996. Other materials sampled in 1996 (thermal system insulation) did not contain detectable asbestos. Observed building materials were generally in good condition at the time of Nova's Site reconnaissance.

4.10 Lead Based Paint

Nova was provided with previous LBP sampling documentation. The sampling report indicated that paint sampling was conducted in 48 locations throughout the Site. Lead was identified in the enamel coating on a bathtub in one apartment unit. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead. Painted surfaces observed at the time of Nova's Site reconnaissance were generally in good condition.

4.11 Radon

According to the EDR report, the Site is located in Zone 1 of the USEPA's radon designation categories. Zone 1 indicates that the expected radon concentration in the Site area are at or above 4.0 picoCuries per Liter (pCi/L) of air. The USEPA action level for radon is 4.0 pCi/L.

Radon sampling performed in conjunction with the 2006 Phase I Assessment of the Site did not identify radon above the USEPA action level.

4.12 Mold

No evidence of water infiltration or visible mold growth was observed within the occupied areas of the building during Nova's limited visual observation of the Site interior. Observations for mold growth were not intended to represent a comprehensive mold inspection.

4.13 Dry Cleaners and/or Laundry Facilities

No laundry or dry cleaning facilities were present at the Site at the time of our visit. Historical and regulatory information reviewed identified no dry cleaning or laundering facilities on the Site.

4.14 Potential Additional Unidentified Site Concerns

No potential additional unidentified Site concerns were identified as a result of this ESA.

4.15 Surrounding Property Observations

General observations of properties adjoining the Site were conducted in conjunction with on-Site observations made April 16, 2007 during Nova's Site reconnaissance and are summarized below.

SURROUNDING PROPERTY OBSERVATIONS		
Direction	**Use**	**Observed Chemical Use/Storage?**
North	Hillsdale Avenue followed by residences	No
East	Kipling Street followed by apartments	No
South	Undeveloped land	No
West	Winthrop Street followed by Battle Creek Regional Park	No

Observations of adjacent properties did not reveal any obvious visual evidence of environmental concerns. None of the facilities is listed on regulatory databases indicative of known or suspected environmental concerns likely to have impacted the Site subsurface.

5.0 REGULATORY REVIEW

Nova reviewed regulatory agency database information compiled by Environmental Data Resources, Inc. (EDR) to help identify recognized environmental conditions in connection with the Site. Unless stated otherwise in this section, the scope of Nova's review is limited to review of the information provided by EDR, and does not include review of regulatory agency files pertaining to specific sites that may have been identified. The regulatory review incorporates the Approximate Minimum Search Distances (AMSDs) as set forth by ASTM plus any additional Client-specific required search distances that may exceed the AMSDs or as deemed applicable by Nova.

The EDR report includes an Orphan list of facilities that could not be precisely located due to inadequate address information. Nova reviewed this list and determined where these facilities are located relative to the Site. *None of the Orphan listings are located on the Site*. The information was incorporated into the discussion of the appropriate database. Additionally, Nova's field survey verifies the locations of EDR-identified facilities in relation to the Site, and, if necessary, adjusts their distances and directions with respect to their actual locations.

The results of the review for each database are discussed below. Databases with listings identified on or in the area of the Site are discussed separately, outside of the table. The locations for the facilities discussed in this section are shown on the figures in the EDR report, included as Appendix E. A detailed description of each regulatory database searched is included in the EDR Report.

5.1 Federal Agency Records Review

The Site was not identified on any of the federal databases within the specified search radii.

Two ***RCRIS-SQG*** facilities were identified within a 0.25-mile radius of the Site. None of these facilities were identified on other databases indicative of the occurrence of releases or documented or suspected environmental impacts. Additionally, the identified facilities are located at least 0.15 mile from the Site. Based on the foregoing information, the identified facilities are not expected to have impacted subsurface conditions at the Site.

5.2 State Agency, Tribal and EDR Proprietary Record Review

The Site was identified on the ***UST*** database. The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST

was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Soil sampling and analysis completed by Nova concurrently with this assessment did not identify petroleum impacts to soils in the area of this UST. The UST system is 30 years old and has reached an age where tanks statistically begin to fail.

Two additional ***UST*** facilities were identified within a 0.25-mile radius of the Site. The identified facilities were concurrently identified on the LUST database and are discussed below.

Three ***LUST*** facilities were identified within a 0.5-mile radius of the Site. These facilities are located at least 0.15 mile from the Site and the files for the releases at all of these facilities have been designated as closed by the MPCA, indicating the releases were investigated and, if necessary, remediated to the satisfaction of the MPCA and do not represent a threat to human health or the environment. Based on their regulatory status and distance from the Site, these facilities are not expected to have impacted subsurface conditions at the Site.

6.0 FINDINGS/OPINIONS/CONCLUSIONS

Nova has conducted this ESA in general accordance with the scope and limitations of ASTM Designation E 1527-2005, "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process". There are no exceptions to, or deletions from the ASTM 1527-2005 standard practice and authorized Scope of Services.

The Site includes approximately 8.9 acres and is occupied by one four-story apartment building containing 216 apartment units. A parking garage occupies the majority of the first level of the building. Exterior areas are occupied by surface parking areas, an outdoor pool area, two picnic areas, and landscaped areas.

The general vicinity of the Site is occupied by undeveloped land, parkland, and single-family and multi-family residential properties. Current uses of adjoining properties include Hillsdale Avenue followed by residences to the north; Kipling Street followed by apartments to the east; undeveloped land followed by Lower Afton Road and residences to the south; and Winthrop Street followed by Battle Creek Regional Park to the west.

The available historical information indicates the Site was undeveloped land from at least 1937 until 1977, when the existing improvements were constructed.

Nova has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of 200 South Winthrop Street and 215 South Kipling Street in St. Paul, Minnesota 55119, the Site. Any exceptions to or deletions from this practice are described in Section 4.1 of this report. This assessment has revealed no evidence of recognized environmental conditions in connection with the Site, except for the following:

- The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment. Soil sampling and analysis completed by Nova concurrently with this assessment did not identify petroleum impacts to soils in the area of this UST. The UST system is 30 years old and has reached an age where tanks statistically begin to fail.

Additionally, the following items of environmental concern were noted that warrant mention.

- Previous sampling identified asbestos in textured ceiling plaster within the Site building and lead in the coating of original vintage bathtubs. Operations and Maintenance Programs are reportedly in place to manage the identified building materials. The observed building materials and painted surfaces were generally in good condition at the Site.
- Previous sampling identified lead in the enamel coating on bathtubs in apartment units. The lead-based paint sampling report recommended assuming that all original vintage bathtubs at the Site be assumed to contain lead coatings. The identified lead-containing surface was reported to be in good condition and the report recommended incorporating this material into an Operations and Maintenance program. All other surfaces tested at the Site were classified as not containing lead.

Recommendations

Based on the findings of this Phase I Environmental Site Assessment, Nova recommends the following:

- Conducting annual tightness and line testing or soil sampling and analysis as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.
- Continued maintenance of identified asbestos-containing materials and lead-containing materials in accordance with the Operations and Maintenance (O&M) Plans for the Site.

7.0 STANDARD OF CARE

The services performed by Nova Consulting Group, Inc. on this project have been conducted with that level of care and skill ordinarily exercised by reputable members of the profession, practicing in the same locality, under similar budget and time constraints. We declare that to the best of our knowledge one or more of the parties involved in the preparation of this report meet the definition of environmental professional as to be defined in §312.10 of 40 C.F.R. 312 and 12.13.2. One or more of the parties involved in the preparation of this report have the specific qualifications base on education, training, and experience to assess a property of the nature, history, and setting of the Site. We have developed and performed the all appropriate inquiries in conformance with the standards and practices as set forth in 40 C.F.R. Part 312. No other warranty is expressed or intended.

This report is exclusively for the use and benefit of those listed on the title page of this report and may not be relied upon by any other person or entity without written permission from Nova.

APPENDIX A

RESUMES

Thomas J. Panning
Senior Technical Reviewer
Project Manager

Mr. Panning is an environmental scientist with over eight years experience relating to environmental assessments and subsurface investigations.

PROFESSIONAL EDUCATION

Bachelor of Science, 1990, Natural Resource Management, Mankato State University, Mankato, Minnesota

SELECTED EXPERIENCE

Mr. Panning has completed environmental assessments of properties ranging from undeveloped sites to large industrial and manufacturing facilities. Mr. Panning's responsibilities include land use history research, asbestos-containing material identification, PCB-containing equipment identification, evaluation of chemical storage and handling procedures and identification of off-site concerns.

Completed 10-mile corridor site assessment, built in a former industrial area. Identified areas of likely contamination so proposed route could be altered.

Completed Phase I site assessment and subsequent Phase II investigation for large, multiple-tenant manufacturing facility. Phase II investigation revealed both on-site and off-site sources of contamination.

Completed Phase I site assessment for entire city block to demolition for new construction. Project included coordinating asbestos survey and extensive file review.

Participated in subsurface investigations of 150 missile sites. Project included soil sampling and report preparation for each site.

Completed numerous indoor air quality investigations for commercial properties and residences. Investigations included building inspections, assessment of potential air quality issues, and sampling for bacteria and fungi in indoor air and building materials.

Developed numerous work plans to address issues identified during indoor air quality investigations. Work plans included specifications for removal of impacted building materials, HVAC duct cleaning, and clearance testing.

CERTIFICATIONS

OSHA 40-Hr. Hazardous Waste Operations Certification (29CFR 1910.120)
AHERA Building Inspection Certification

Anne K. Sinna
Project Manager

Ms. Sinna is a Project Manager in Nova's Chaska, Minnesota office with five years experience relating to environmental assessments including HUD-MAP Phase I Assessments and subsurface investigations.

PROFESSIONAL EDUCATION

Bachelor of Arts, Biology and Environmental Studies, May 2000,
College of Saint Benedict, St. Joseph, Minnesota

SELECTED EXPERIENCE

Ms. Sinna has completed all aspects of environmental assessments of properties including undeveloped sites, commercial, and residential real estate properties. During the environmental assessment process, Ms. Sinna's responsibilities include land use history research, asbestos-containing material identification, PCB-containing material identification, evaluation of chemical storage and handling procedures, and identification of off-site concerns. Ms. Sinna successfully drafts, edits, and completes detailed written reports of findings and recommendations within budget and time constraints.

Ms. Sinna has completed Phase I Environmental Assessments for commercial and retail properties, automotive service facilities, portfolios including assisted living facilities, and multifamily residential complexes, and has technical knowledge of HUD-MAP requirements for environmental assessments.

Ms. Sinna has dealt with wetland issues in Phase I Environmental Site Assessments and is knowledgeable about HUD-MAP. Ms. Sinna also has participated in various subsurface investigations, which include soil sampling and report preparation for each site.

Ms. Sinna's previous experience includes organizing, and leading environmental education programs involving wellhead protection and lead based paint. Ms. Sinna was responsible for working with and coordinating the efforts of various organizations, businesses, government officials and community members to create and implement a Wellhead Protection Program for the City of Cold Spring and Lead Poisoning Prevention for Hennepin County. Ms. Sinna also has experience with quality analysis/testing of abrasives and microfinishing film products for a worldwide manufacturing company.

CERTIFICATION

MN/AHERA Certified Asbestos Building Inspector
OSHA 40 Hour Hazardous Waste Operations Certification (29CFR 1910.120)

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

RCRAInfo: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System(RCRIS). The database includes selective information on sites which generate, transport, store , treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month Large quantity generators generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

A review of the RCRA-SQG list, as provided by EDR, and dated 06/13/2006 has revealed that there are 2 RCRA-SQG sites within approximately 0.25 miles of the target property.

EXECUTIVE SUMMARY

STATE AND LOCAL RECORDS

LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Minnesota Pollution Control Agency's Leak Sites list.

A review of the LUST list, as provided by EDR, and dated 03/01/2007 has revealed that there are 3 LUST sites within approximately 0.5 miles of the target property.

UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Minnesota Pollution Control's Underground Storage Tank File.

A review of the UST list, as provided by EDR, and dated 03/01/2007 has revealed that there are 2 UST sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Dist / Dir	Map ID	Page

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

MN-DELTA (Minnesota - Permitting, Compliance, And Enforcement Information Management System) facilitates the issuance of permits and manages compliance

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Telephone 206-553-8665

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 09/27/2006
Date Data Arrived at EDR: 11/01/2006
Date Made Active in Reports: 11/22/2006
Number of Days to Update: 21

Data Release Frequency: Quarterly

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 12/28/2006

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991
Date Data Arrived at EDR: 02/02/1994
Date Made Active in Reports: 03/30/1994
Number of Days to Update: 56

Data Release Frequency: No Update Planned

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 02/27/2007
Date Data Arrived at EDR: 03/21/2007
Date Made Active in Reports: 04/27/2007
Number of Days to Update: 37

Source: EPA

Last EDR Contact: 03/21/2007
Next Scheduled EDR Contact: 06/18/2007
Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

Date of Government Version: 12/20/2006
Date Data Arrived at EDR: 01/29/2007

Telephone: 800-424-9346
Last EDR Contact: 03/05/2007
Next Scheduled EDR Contact: 06/04/2007
Data Release Frequency: Quarterly

RCRA: Resource Conservation and Recovery Act Information

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities--especially those without EPA Brownfields Assessment Demonstration Pilots--minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

Date of Government Version: 04/17/1995

BRS: Biennial Reporting System

The Biennial Reporting System is a national system administered by the EPA that collects data on the generation and management of hazardous waste. BRS captures detailed data from two groups: Large Quantity Generators (LQG) and Treatment, Storage, and Disposal Facilities.

STATE AND LOCAL RECORDS

SHWS: Site Remediation System Database

The SRS database includes all sites that the State Superfund Program is dealing with or has dealt with. The Superfund Program identifies, investigates and determines appropriate cleanup plans for abandoned or uncontrolled hazardous waste sites where a release or potential release of a hazardous substance poses a risk to human health or the environment.

Date of Government Version: 04/01/2007

SWF/LF: Permitted Solid Waste Disposal Facilities

Solid Waste Facilities/Landfill Sites. SWF/LF type records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. Depending on the state, these may be active or inactive facilities or open dumps that failed to meet RCRA Subtitle D Section 4004 criteria for solid waste landfills or disposal sites.

LCP: Closed Landfills Priority List

The Minnesota Legislature enacted a law to manage and clean up the state's closed Mixed Municipal Solid Waste Landfills. Under that law, the MPCA is required to create and periodically revise a priority list of qualified landfills, based on the relative health and environmental risks they present. The MPCA established the first such priority list in December, 1994.

CDL: Clandestine Drug Labs
This data was passively gathered. That is, the DOH asks law enforcement and other agencies to notify them of Clandestine Drug Labs (CDLs). They do not require reporting of events. Therefore the data represents only a subset of all CDLs. This data has not been verified. The DOH has made no attempt to verify that reported CDLs actually occurred. They have no knowledge if the CDL was involved in cooking or just consisted of chemicals associated with Meth production. The reports they receive are that a suspected CDL was seized.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

This map includes information copyrighted by PennWell Corporation. This information is provided on a best effort basis and PennWell Corporation does not guarantee its accuracy nor warrant its fitness for any particular purpose. Such information has been reprinted with the permission of PennWell.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

1.0 INTRODUCTION

1.1 Authorization

In accordance with the written authorization received from Hurley Partners, Limited Partnership, LLP, Nova Consulting Group, Inc. (Nova) conducted a Phase II Environmental Site Assessment (ESA) at the Grand Pre by the Park Apartments located in St. Paul, Minnesota (Site). A Site Location Map is included as Figure 1.

1.2 Background

The Site operates a 30,000-gallon underground storage tank used to store heating oil as a backup fuel source for the boilers at the Site. The UST was installed in 1977 and is constructed of steel. Review of available information indicates the UST and piping systems are not equipped with cathodic protection or spill containment.

1.3 Objective

The objective of this Phase II ESA was to evaluate the soils at the Site for the presence of hydrocarbon impacts associated with the 30,000-gallon UST at the Site.

1.4 Scope of Services

The environmental services that Nova provided for this project included:

- Completion of two direct push soil borings (labeled GP-1 and GP-2);
- Collection of soil samples on a continuous basis, classification of the soil samples, and soil screening for the presence of unusual odors and/or staining, including organic vapors using a MiniRae photoionization detector (PID) equipped with an 10.6 eV lamp;
- Collection and submittal of soil samples collected from the borings for laboratory analysis for diesel range organics (DRO), and benzene, toluene, ethyl benzene, and xylenes (BTEX), and,
- Preparation of a written report summarizing the results of the assessment.

2.0 METHODS AND PROCEDURES

2.1 Soil Boring Locations

Nova completed two direct push soil borings (labeled GP-1 and GP-2) at the Site on April 16, 2007. Soil borings GP-1 and GP-2 were completed at each end of the UST at the Site. A map depicting the soil boring locations is included as Figure 2.

2.2 Soil Boring Completion Procedures

Soil borings GP-1 and GP-2 were completed using a truck mounted Geoprobe 5400 Hydraulic push probe. A Geoprobe® Macro-Core sampler was used to collect the soil samples from the borings at continuous four-foot intervals to the termination depth of the borings (25 feet below grade (bg) and 16 feet bg). The Macro-Core sampler consists of a 2.25-inch outside diameter, 48-inch long nickel-plated alloy-steel sampling tube that is continuously filled with soil as it is pushed and/or hammered to the desired sampling depth. The macro core sampler was cleaned with Alconox soap and a fresh water rinse between sampling intervals and new sampling liners were used for each sampling interval.

An environmental geologist was on-site to record the physical description of the soils encountered at each boring location on a field-boring log. The field-boring logs are attached as Appendix A.

2.3 Field Screening

The soil samples were evaluated for the presence of unusual odors or staining. Additionally, the soil samples were screened for the presence of organic vapors using a Mini-Rae PID. The PID was equipped with a 10.6 eV lamp and was calibrated to an isobutylene standard prior to being used at the Site. The soil samples were screened utilizing the headspace field analysis technique.

The headspace technique consists of half-filling a quart sized zip-lock bag with a soil sample and quickly sealing the bag. Headspace development proceeds for at least 10 minutes. The bag is shaken vigorously for 15 seconds, at both the beginning and the end of the headspace development period. After headspace development, the bag is opened slightly and the PID probe is inserted to one-half the headspace depth. The highest reading observed on the PID is then recorded.

2.4 Laboratory Chemical Analyses

One soil sample was collected from each of the borings for laboratory chemical analysis. Since no indications of contamination were encountered during field screening, the soil samples were collected from the 12-15 feet interval of the borings as this interval corresponded to the bottom of the UST and would be the interval most likely to be impacted if a release had occurred. The samples were placed in laboratory-supplied containers, stored in a cooler and transported to Pace Analytical Services in Green Bay, Wisconsin using chain-of-custody procedures for laboratory chemical analysis of DRO and BTEX. Pace Analytical Services is certified to analyze soil samples in the State of Minnesota.

3.0 RESULTS

3.1 Geology and Site Conditions

Soil boring logs with descriptions of the encountered materials and water level information are contained in Appendix A. The depths that are shown as changes may be transitional, and the depths of the transitions likely vary horizontally.

In general, the soil encountered at the Site consisted of well-sorted sand and sand with clay. Groundwater was not encountered in GP-1 or GP-2.

3.2 Field Screening

Field screening of the soil samples collected from GP-1 and GP-2 did not detect concentrations of organic vapors above the PID detection limits. No unusual odors or staining were observed in any of the soil samples.

3.3 Chemical Analyses

Chemical analysis of the soil samples collected from GP-1 and GP-2 did not detect the presence of DRO or BTEX at concentrations greater than or equal to the laboratory reporting limits. The complete laboratory report is contained in Appendix B.

4.0 CONCLUSIONS AND RECOMMENDATIONS

Field screening of the soil samples collected from GP-1 and GP-2 did not detect visual staining, noticeable odors, or elevated concentrations of organic vapors when screened with a PID. Additionally, chemical analysis of soil samples collected from GP-1 and GP-2 did not detect DRO or BTEX at or above laboratory reporting limits.

Based on the results of this Phase II Site Assessment, additional investigation of the areas evaluated as part of this assessment is not warranted at this time.

Nova recommends conducting annual tightness and line testing or soil sampling and analysis as an ongoing means to evaluate the integrity of the UST system. In the event a release is detected from the UST system, the release should be immediately reported to the Minnesota Pollution Control Agency (MPCA) and investigated/remediated in accordance with MPCA petroleum release investigation guidance documents.

5.0 STANDARD OF CARE

The services performed by Nova Consulting Group, Inc. on this project have been conducted with that level of care and skill ordinarily exercised by reputable members of the profession, practicing in the same locality, under similar budget and time constraints.

This report is exclusively for the use and benefit of those listed on the title page of this report and may not be relied upon by any other person or entity without written permission from Nova.

Qualifier Codes

Flag	Applies To	Explanation
A	Inorganic	Analyte is detected in the method blank. Method blank criteria is evaluated to the laboratory method detection limit. Additionally, method blank acceptance may be based on project specific criteria or determined from analyte concentrations in the sample and are evaluated on a sample by sample basis.
B	Inorganic	The analyte has been detected between the method detection limit and the reporting limit.
B	Organic	Analyte is present in the method blank. Method blank criteria is evaluated to the laboratory method detection limit. Additionally, method blank acceptance may be based on project specific criteria or determined from analyte concentrations in the sample and are evaluated on a sample by sample basis.
C	All	Elevated detection limit.
D	All	Analyte value from diluted analysis or surrogate result not applicable due to sample dilution.
E	Inorganic	Estimated concentration due to matrix interferences. During the metals analysis the serial dilution failed to meet the established control limits of 0-10%. The sample concentration is greater than 50 times the IDL for analysis done on the ICP or 100 times the IDL for analysis done on the ICP-MS. The result was flagged with the E qualifier to indicate that a physical interference was observed.
E	Organic	Analyte concentration exceeds calibration range.
F	Inorganic	Due to potential interferences for this analysis by Inductively Coupled Plasma techniques (SW-846 Method 6010), this analyte has been confirmed by and reported from an alternate method.
F	Organic	Surrogate results outside control criteria.
G	All	The result is estimated because the concentration is less than the lowest calibration standard concentration utilized in the initial calibration. The method detection limit is less than the reporting limit specified for this project.
H	All	Preservation, extraction or analysis performed past holding time.
HF	Inorganic	This test is considered a field parameter, and the recommended holding time is 15 minutes from collection. The analysis was performed in the laboratory beyond the recommended holding time.
J	All	Concentration detected equal to or greater than the method detection limit but less than the reporting limit.
K	Organic	Detection limit may be elevated due to the presence of an unrequested analyte.
L	All	Elevated detection limit due to low sample volume.
M	Organic	Sample pH was greater than 2
N	All	Spiked sample recovery not within control limits.
O	Organic	Sample received overweight.
P	Organic	The relative percent difference between the two columns for detected concentrations was greater than 40%.
Q	All	The analyte has been detected between the limit of detection (LOD) and limit of quantitation (LOQ). The results are qualified due to the uncertainty of analyte concentrations within this range.
S	Organic	The relative percent difference between quantitation and confirmation columns exceeds internal quality control criteria. Because the result is unconfirmed, it has been reported as a non-detect with an elevated detection limit.
U	All	The analyte was not detected at or above the reporting limit.
V	All	Sample received with headspace.
W	All	A second aliquot of sample was analyzed from a container with headspace.
X	All	See Sample Narrative.
Z	Organics	This compound was separated in the check standard but it did not meet the resolution criteria as set forth in SW846.
&	All	Laboratory Control Spike recovery not within control limits.
*	All	Precision not within control limits.
+	Inorganic	The sample result is greater then four times the spike level: therefore, the percent recovery is not evaluated.
<	All	The analyte was not detected at or above the reporting limit.
1	Inorganic	Dissolved analyte or filtered analyte greater than total analyte; analyses passed QC based on precision criteria.
2	Inorganic	Dissolved analyte or filtered analyte greater than total analyte; analyses failed QC based on precision criteria.
3	Inorganic	BOD result is estimated due to the BOD blank exceeding the allowable oxygen depletion.
4	Inorganic	BOD duplicate precision not within control limits. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
5	Inorganic	BOD result is estimated due to insufficient oxygen depletion. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
6	Inorganic	BOD laboratory control sample not within control limits. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
7	Inorganic	BOD result is estimated due to complete oxygen depletion. Due to the 48 hour holding time for this test, it is not practical to reanalyze and try to correct the deficiency.
8	Inorganic	Sample was received unpreserved. Sample was preserved either at the time of receipt or at the time of sample preparation.
9	Inorganic	Sample was received with insufficient preservation. Acid was added either at the time of receipt or at the time of sample preparation.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Federal RCRA generators list

RCRA-CESQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

A review of the RCRA-CESQG list, as provided by EDR, and dated 09/13/2017 has revealed that there are 2 RCRA-CESQG sites within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
AUTOZONE 3082	***751 N CENTURY DR***	***N 1/8 - 1/4 (0.228 mi.)***	***C33***	***107***

HUGHES & CO INC DBA	283 MCKNIGHT RD	SE 1/8 - 1/4 (0.138 mi.)	B11	45

State- and tribal - equivalent CERCLIS

MN SHWS: The Superfund Site Information Listing records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Minnesota Pollution Control's Superfund Permanent List of Priorities.

A review of the MN SHWS list, as provided by EDR, and dated 08/25/2017 has revealed that there is 1 MN SHWS site within approximately 1 mile of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
MCKNIGHT MARKET Facility Id: SR246	***275 MCKNIGHT RD S***	***SE 0 - 1/8 (0.124 mi.)***	***B10***	***26***

State and tribal landfill and/or solid waste disposal site lists

MN SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Minnesota Pollution Control's Permitted Solid Waste Disposal Facilities list.

A review of the MN SWF/LF list, as provided by EDR, and dated 08/08/2017 has revealed that there is 1 MN SWF/LF site within approximately 0.5 miles of the target property.

EXECUTIVE SUMMARY

State and tribal leaking storage tank lists

MN LUST: The Leaking Underground Storage Tank Incident Reports contain an inventory of reported leaking underground storage tank incidents. The data come from the Minnesota Pollution Control Agency's Leak Sites list.

A review of the MN LUST list, as provided by EDR, and dated 07/26/2017 has revealed that there are 5 MN LUST sites within approximately 0.5 miles of the target property.

State and tribal registered storage tank lists

MN UST: The Underground Storage Tank database contains registered USTs. USTs are regulated under Subtitle I of the Resource Conservation and Recovery Act (RCRA). The data come from the Minnesota Pollution Control's Underground Storage Tank File.

A review of the MN UST list, as provided by EDR, and dated 07/26/2017 has revealed that there are 4 MN UST sites within approximately 0.25 miles of the target property.

State and tribal Brownfields sites

MN BROWNFIELDS: Purchasing, selling, or developing property can present a special set of obstacles if the property is contaminated with chemicals. The Petroleum Brownfields Program is one of several programs within the Minnesota Pollution Control Agency (MPCA) designed to help people address these obstacles. The purpose of the Petroleum Brownfields Program is to provide the technical assistance and liability assurance needed to expedite and facilitate the development, transfer, investigation and/or cleanup of property that is contaminated with petroleum.

A review of the MN BROWNFIELDS list, as provided by EDR, and dated 08/25/2017 has revealed that there are 2 MN BROWNFIELDS sites within approximately 0.5 miles of the target property.

Other Ascertainable Records

RCRA NonGen / NLR: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA NonGen / NLR list, as provided by EDR, and dated 09/13/2017 has revealed that there are 4 RCRA NonGen / NLR sites within approximately 0.25 miles of the target property.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR Hist Auto: EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

A review of the EDR Hist Auto list, as provided by EDR, has revealed that there is 1 EDR Hist Auto site within approximately 0.125 miles of the target property.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
AIR EMISSIONS CLASSIFICATION UNKNOWN

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

FINDS:

Registry ID: 110003787055

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

ORPHAN SUMMARY

City	EDR ID	Site Name	Site Address	Zip	Database(s)
		NO SITES FOUND			

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Date of Government Version: 05/30/2017
Date Data Arrived at EDR: 06/08/2017
Date Made Active in Reports: 09/15/2017
Number of Days to Update: 99

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

LCP: Closed Landfills Priority List
The Minnesota Legislature enacted a law to manage and clean up the state's closed Mixed Municipal Solid Waste Landfills. Under that law, the MPCA is required to create and periodically revise a priority list of qualified landfills, based on the relative health and environmental risks they present. The MPCA established the first such priority list in December, 1994.

State and tribal Brownfields sites

BROWNFIELDS: Petroleum Brownfields Program Sites
Purchasing, selling, or developing property can present a special set of obstacles if the property is contaminated with chemicals. The Petroleum Brownfields Program is one of several programs within the Minnesota Pollution Control Agency (MPCA) designed to help people address these obstacles. The purpose of the Petroleum Brownfields Program is to provide the technical assistance and liability assurance needed to expedite and facilitate the development, transfer, investigation and/or cleanup of property that is contaminated with petroleum.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

CDL: Clandestine Drug Labs

This data was passively gathered. That is, the DOH asks law enforcement and other agencies to notify them of Clandestine Drug Labs (CDLs). They do not require reporting of events. Therefore the data represents only a subset of all CDLs. This data has not been verified. The DOH has made no attempt to verify that reported CDLs actually occurred. They have no knowledge if the CDL was involved in cooking or just consisted of chemicals associated with Meth production. The reports they receive are that a suspected CDL was seized.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006
Date Data Arrived at EDR: 03/01/2007

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines
An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

Last EDR Contact: 09/13/2017
Next Scheduled EDR Contact: 12/25/2017
Data Release Frequency: Varies

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

Data Release Frequency: No Update Planned

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data

Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 07/28/2017

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

Daycare Centers: Child Care Centers
Source: Department of Human Services
Telephone: 651-296-3971

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005 and 2010 from the U.S. Fish and Wildlife Service.
